

BRAND TOOLKIT VERSION 3.0

The **Hyland visual brand identity** focuses on digital innovation and empowerment. It represents a future-focused enterprise software company that shows up in the marketplace as bold, confident and positively disruptive. It evokes swagger and fearlessness.

It is created out of sharp, bold visuals that represent innovation: Angular lines that draw attention to cutting-edge technology and precision; a color palette that symbolizes technology and forward-thinking; and dramatic imagery that connects to the key industries that we care most about.

This guide delivers tools for creating a dynamic look and feel, while also locking in visual consistency, so our brand always represents who we are and what we stand for.

Overview of toolkit

Everything we say is an opportunity to make a connection and to reinforce who we are and why we matter to the world. With consistent use, this toolkit creates that connection to our brand and enables recall and trust.

DESIGN PRINCIPLES

Key design principles include:

Our logo

This is our most important asset. With its dynamic and sharp angles it conveys agility. The intentional forward motion represents our future direction.

Graphic devices

The H mark — a device at the core of our identity — represents our forward direction and a gateway to digital innovation and empowerment. It provides a template for our layouts, graphic shapes and the portal. It is a versatile device that serves as a unifying element across all brand assets.

Typography

We use distinctive, legible and accessible typography. With its eye-catching uppercase headline approach, it conveys strength and leadership.

Color

Our color palette is vibrant and modern. With light- and dark-mode gradients and dynamic accent colors, it symbolizes technology and forward thinking.

Imagery

We use dramatic and bold imagery. Its abstract focus conveys swagger and innovative thinking while the human-centered photography connects the key industries that we care most about.

Design principles /
Key design principles
in use

1. Our logo

We have a few color variants (see page 8). These are best placed in either corner of most communications.

2. Typography

Uppercase Figtree ExtraBold for our headlines and Source Sans 3 sentence case for our body copy. Headlines are also best placed in either corner of most communications.

3. Color

Main backgrounds for all communications are led by our dark and light gradients, and complimented by our secondary color palette, which derives from the H mark blocks.

4. Imagery

Human-centric photography with abstract technology and data images.

5. Graphic devices

These shapes are all born from the H mark.

OUR LOGO

Our logo is our most important asset and should be the first choice when choosing an element to represent the brand.

Our logo

Our logo /
Full-color variants

Our logo exists as 4 variants:
horizontal, stacked, Hyland
word mark and the H mark.

The horizontal and stacked

Always try to lead with either the
horizontal or the stacked full-color logo.
Use the stacked logo when space is more
restricted, such as an event flag or a thin
digital banner.

The word mark

The word mark can be used in certain
executions where there is an additional
horizontal or stacked logo. For example,
on a portal design the word mark can
be placed over the top. It should also be
used when space is too restricted for a
horizontal or stacked logo.

The H mark

The H mark can be used when there
is a company name present, such as
on social or internal documents and
presentations. As the brand is already
present in this toolkit for instance, the
H mark is used as a badge in the bottom
corner of each slide.

HORIZONTAL LOGO

STACKED LOGO

HYLAND WORD MARK

H MARK

Our logo / Clear space and minimum sizes

Consistent use

It's essential the logo is used consistently to build our brand recognition. Make sure sufficient clear space is allowed around the logo. Spacing should be at least the height of an H mark block, and for the word mark it should be 1.5x the height of the logo itself.

MINIMUM FULL-COLOR SIZES

MINIMUM SINGLE BLUE COLOR SIZES

MINIMUM DIGITAL FULL-COLOR SIZES

MINIMUM SINGLE BLUE COLOR SIZES

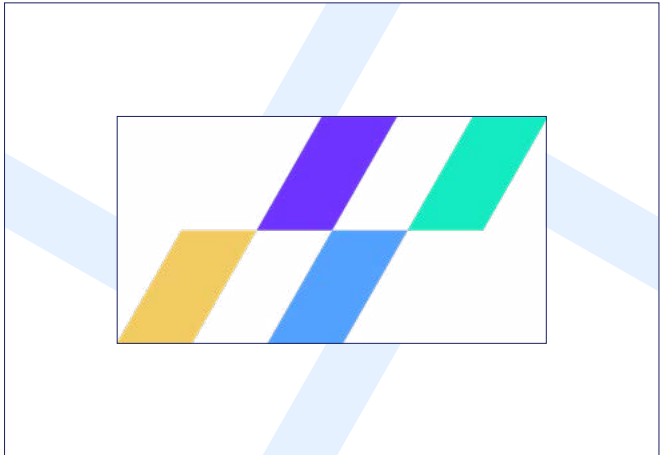

HORIZONTAL LOGO

STACKED LOGO

THE WORD MARK

THE H MARK

Our logo / Color options

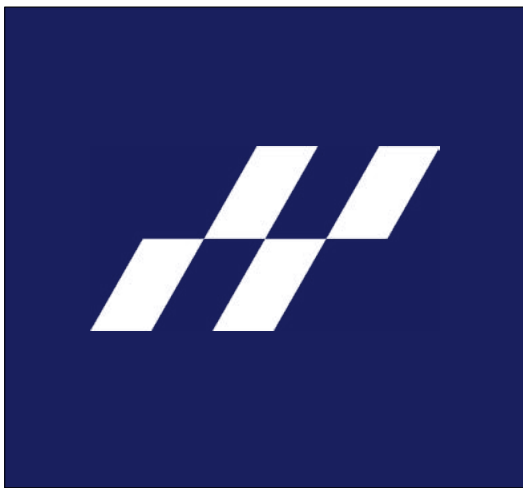

There are several color combinations available, but the preferred logo is the full-color version, which should be used wherever possible.

When to use single blue or white color

Both the single blue and white color logos should be used when the background causes visibility issues or the full-color logo is smaller than 1.102".

PREFERRED FULL-COLOR LOGO

Our logo / What to avoid

The following guidance applies to all variants of the logo:

Avoid using the logo on busy backgrounds.

Avoid changing the sizing relationship between the word mark and the H mark.

Avoid using a different-colored logo.

Avoid rotating the logo.

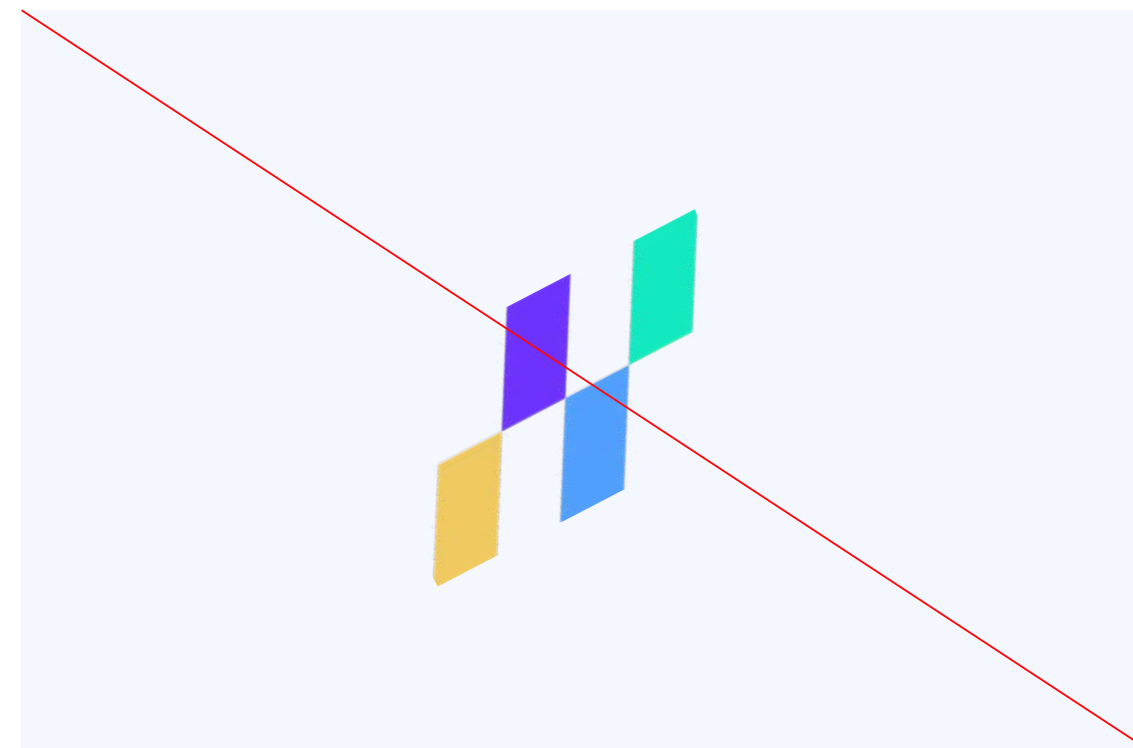

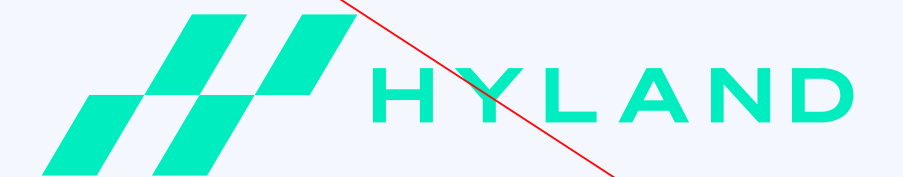

Avoid using the white-out version on an inaccessible background color.

Avoid using a full-color logo on secondary colors.

Avoid using JPEGs as they will include a solid white background. PNG is generally the right format for transparency.

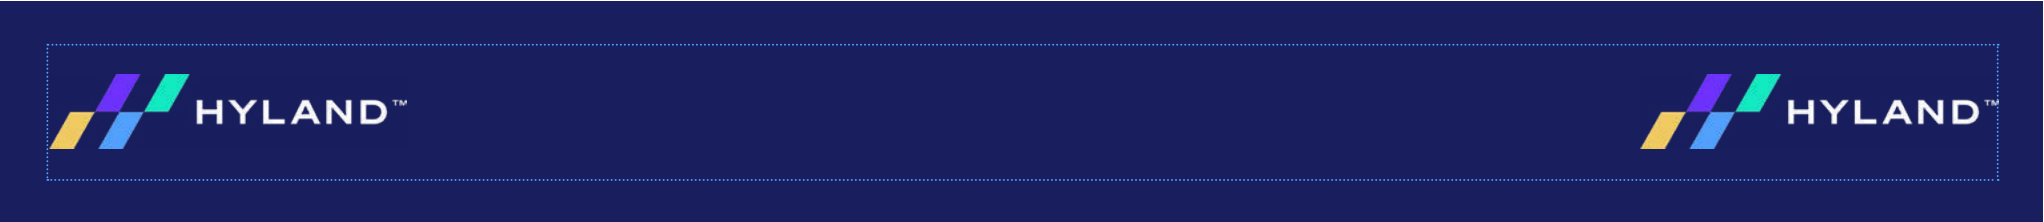

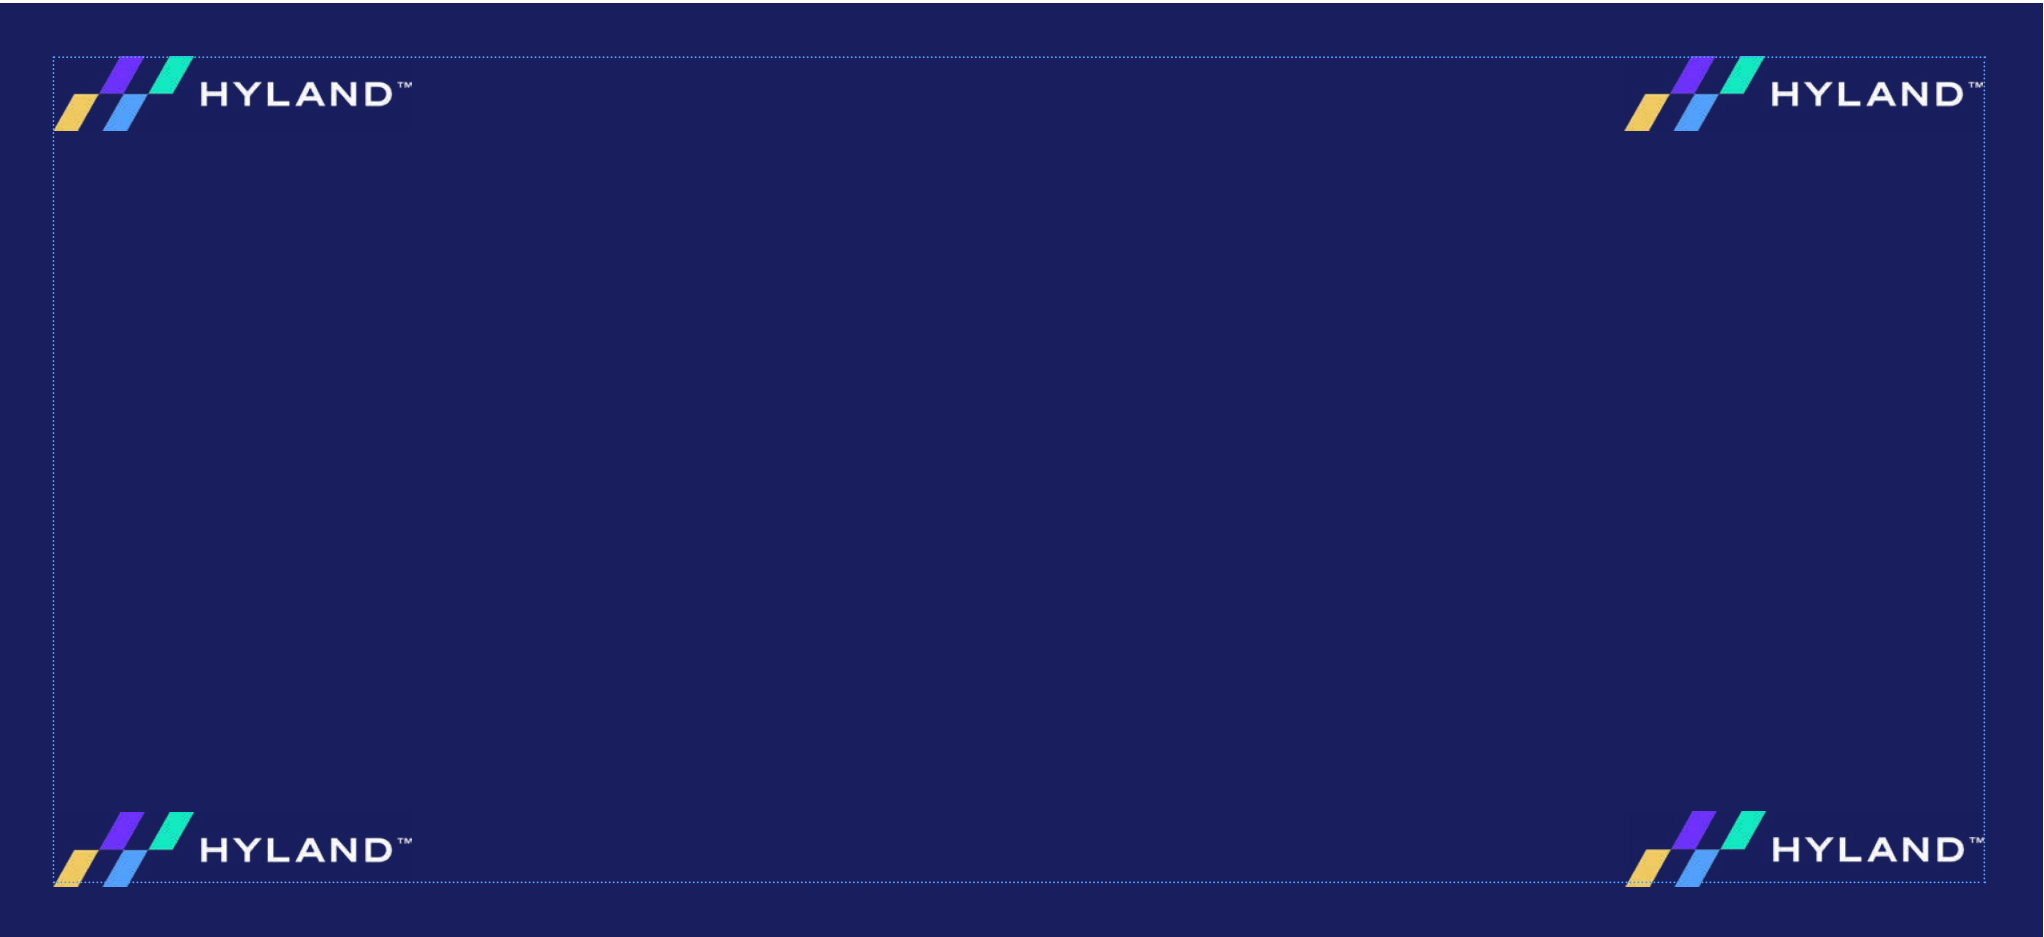

Avoid adjusting the placement of the word mark to the H mark.

Avoid using an old or different word mark logo.

Our logo / Positioning

To keep a level of flexibility in terms of logo positioning, use your best discretion based on that particular layout. A general guide is to place the logo on either a corner or centered as shown.

TYPOGRAPHY

Typography is a key part of our communications. It's led by a distinctive uppercase headline approach, and backed up with a clear and legible body copy style.

Typography / Our fonts

To keep our communications consistent, we use Figtree and Source Sans 3 for all our internal and external communications. The following examples of the types of communications created with our fonts include:

- signage
- event branding
- social posts
- websites
- merchandise
- PPT presentations

In cases where Figtree is not available, such as in Office 365, please use Arial Nova Bold for headlines.

Both font families are available to download here:

fonts.google.com

HEADLINE TYPEFACE

**FIGTREE
EXTRA BOLD**

BODY COPY TYPEFACES

Source Sans 3 Bold
Source Sans 3 Regular
Source Sans 3 Light

Typography /
Headline vs. lowercase

The majority of our headlines are led by uppercase formatting, but in certain instances where word count increases to 10 or more words, please revert to lower case (in the same weight) so that legibility isn't lost.

Text is best placed in either corner, aligned with the logo and adhering to the same distance from the edge.

DISTANCE FROM THE EDGE SHOULD BE AT
LEAST 1.5X THE HEIGHT OF AN H MARK BLOCK

SHORT UPPERCASE HEADLINE

LONG SENTENCE CASE HEADLINE

Typography / Figtree Family

The Figtree font family below shows all available weights that can be used. ExtraBold is preferred for headlines. Use your best discretion when using other weights when a level of hierarchy is needed for more copy-heavy communications.

Typography / What to avoid

Avoid placing type on a background that causes visibility issues.

Avoid aligning type to the edge of a canvas or an image.

Avoid changing the weight of our headlines when in uppercase.

Avoid condensing or stretching any typography.

COLOR

Color use is an integral part of our communications. Our new palette consists of mainly our light- and dark-mode gradients with vibrant accent colors for additional flexibility.

Color / Color palette

Our color palette is led by our dark blue and light gray gradients, predominantly used for backgrounds. You can use either at your discretion depending on the execution.

Our secondary colors (teal, blue, purple and yellow) offer additional flexibility to our communications. However, our secondary colors should never dominate and should only be used to elevate content.

Approved tints from the secondary palette are provided to improve accessibility when a full-color option lacks sufficient contrast with the background. In these cases, dark blue text should be used to ensure readability.

When printing, colors should match the associated Pantone colors to maintain consistency and professionalism.

SECONDARY COLOR PALETTE

Color / Gradients and accessibility

The gradient pack is made up of six variants and these are the only approved gradients to use as part of the Hyland brand, these include:

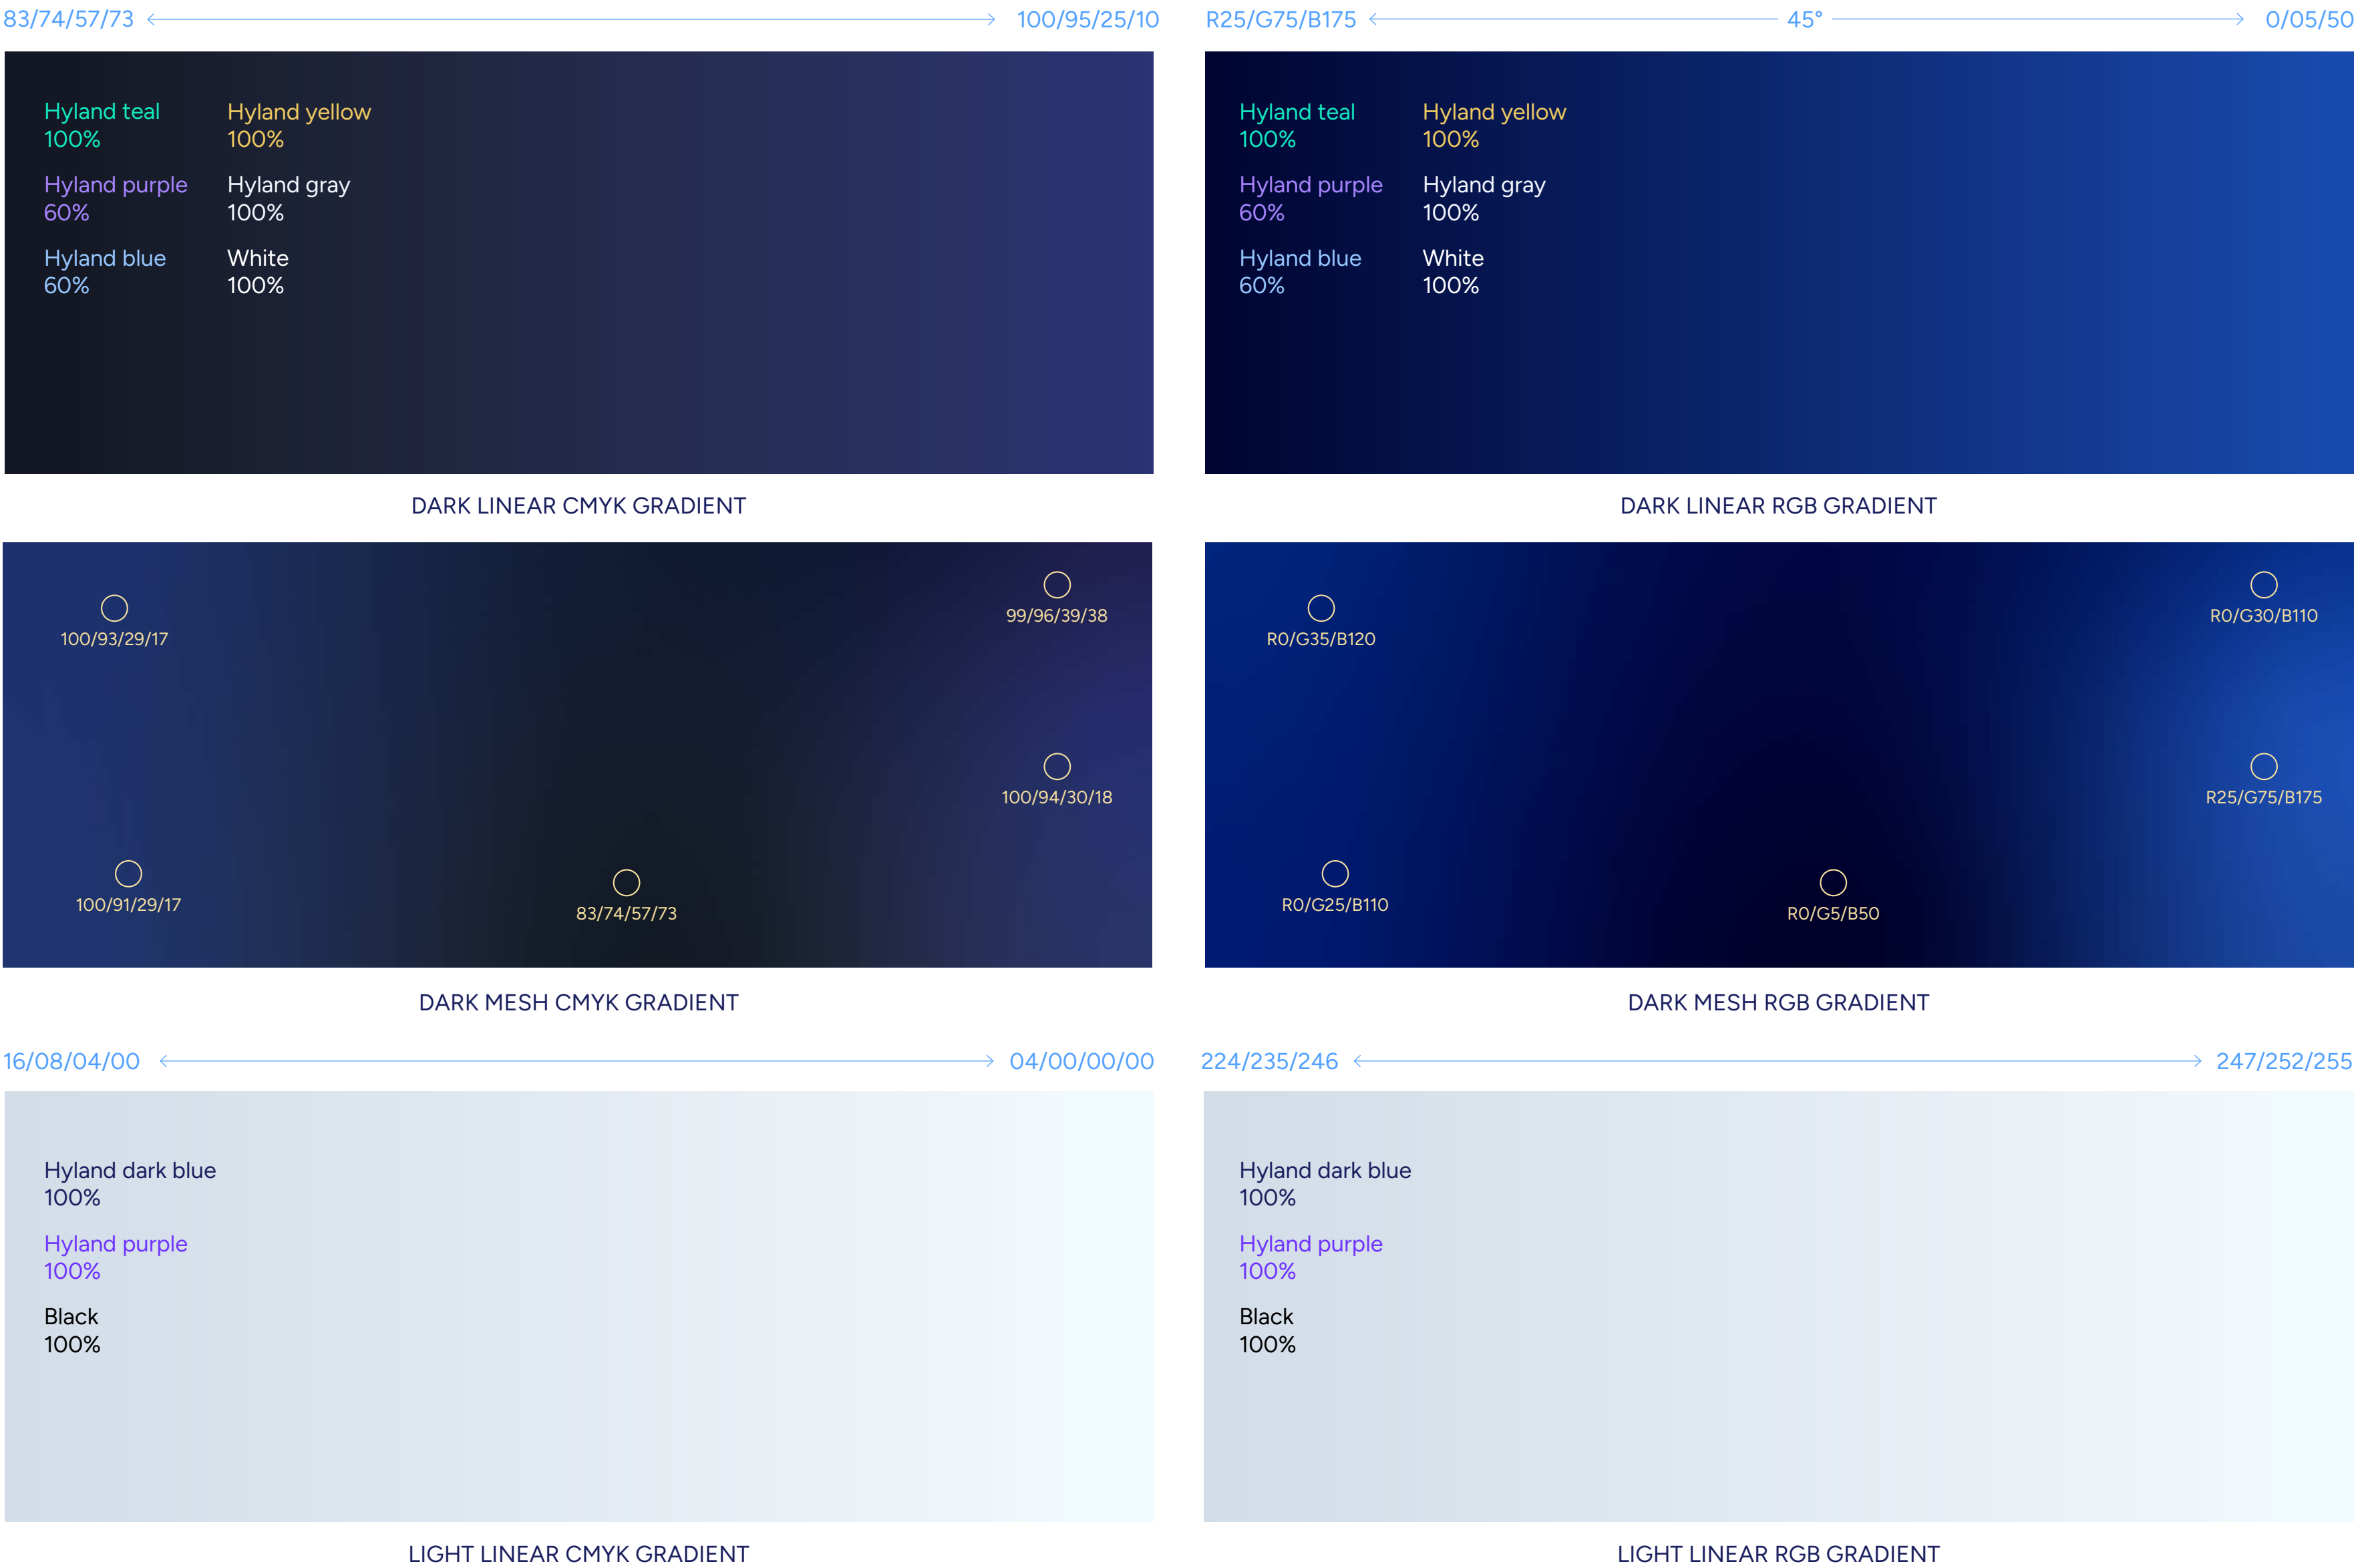

- Dark linear CMYK gradient
- Dark linear RGB gradient
- Dark mesh CMYK gradient
- Dark mesh RGB gradient
- Light linear CMYK gradient
- Light linear RGB gradient

The mesh gradient is preferred for most communications but doesn't perform as well within CMYK print. Because of this, a linear gradient is also available.

For consistency, please only use a linear for both when the output is digital and print.

As shown, you can see how the colors can be used against our backgrounds (these apply for linear and mesh gradients).

All gradients are available but can also be produced as a vector, and the values to create those are shown.

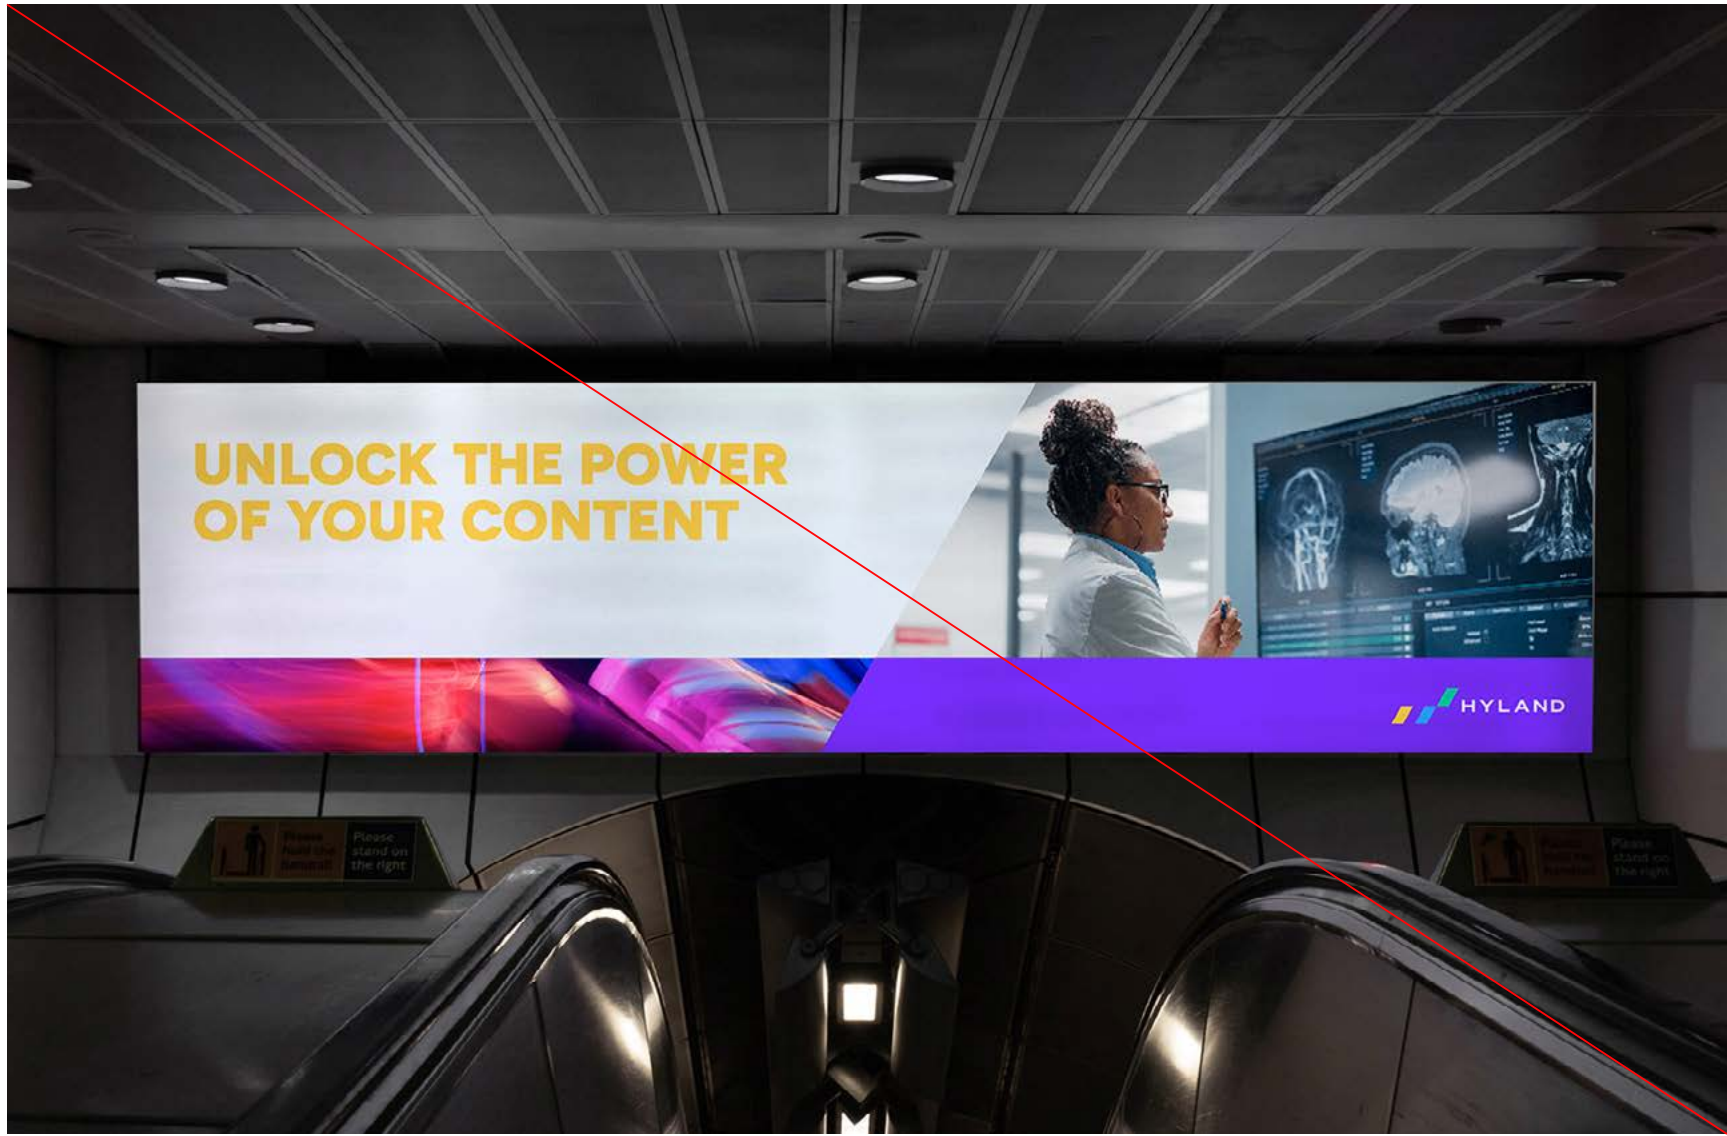

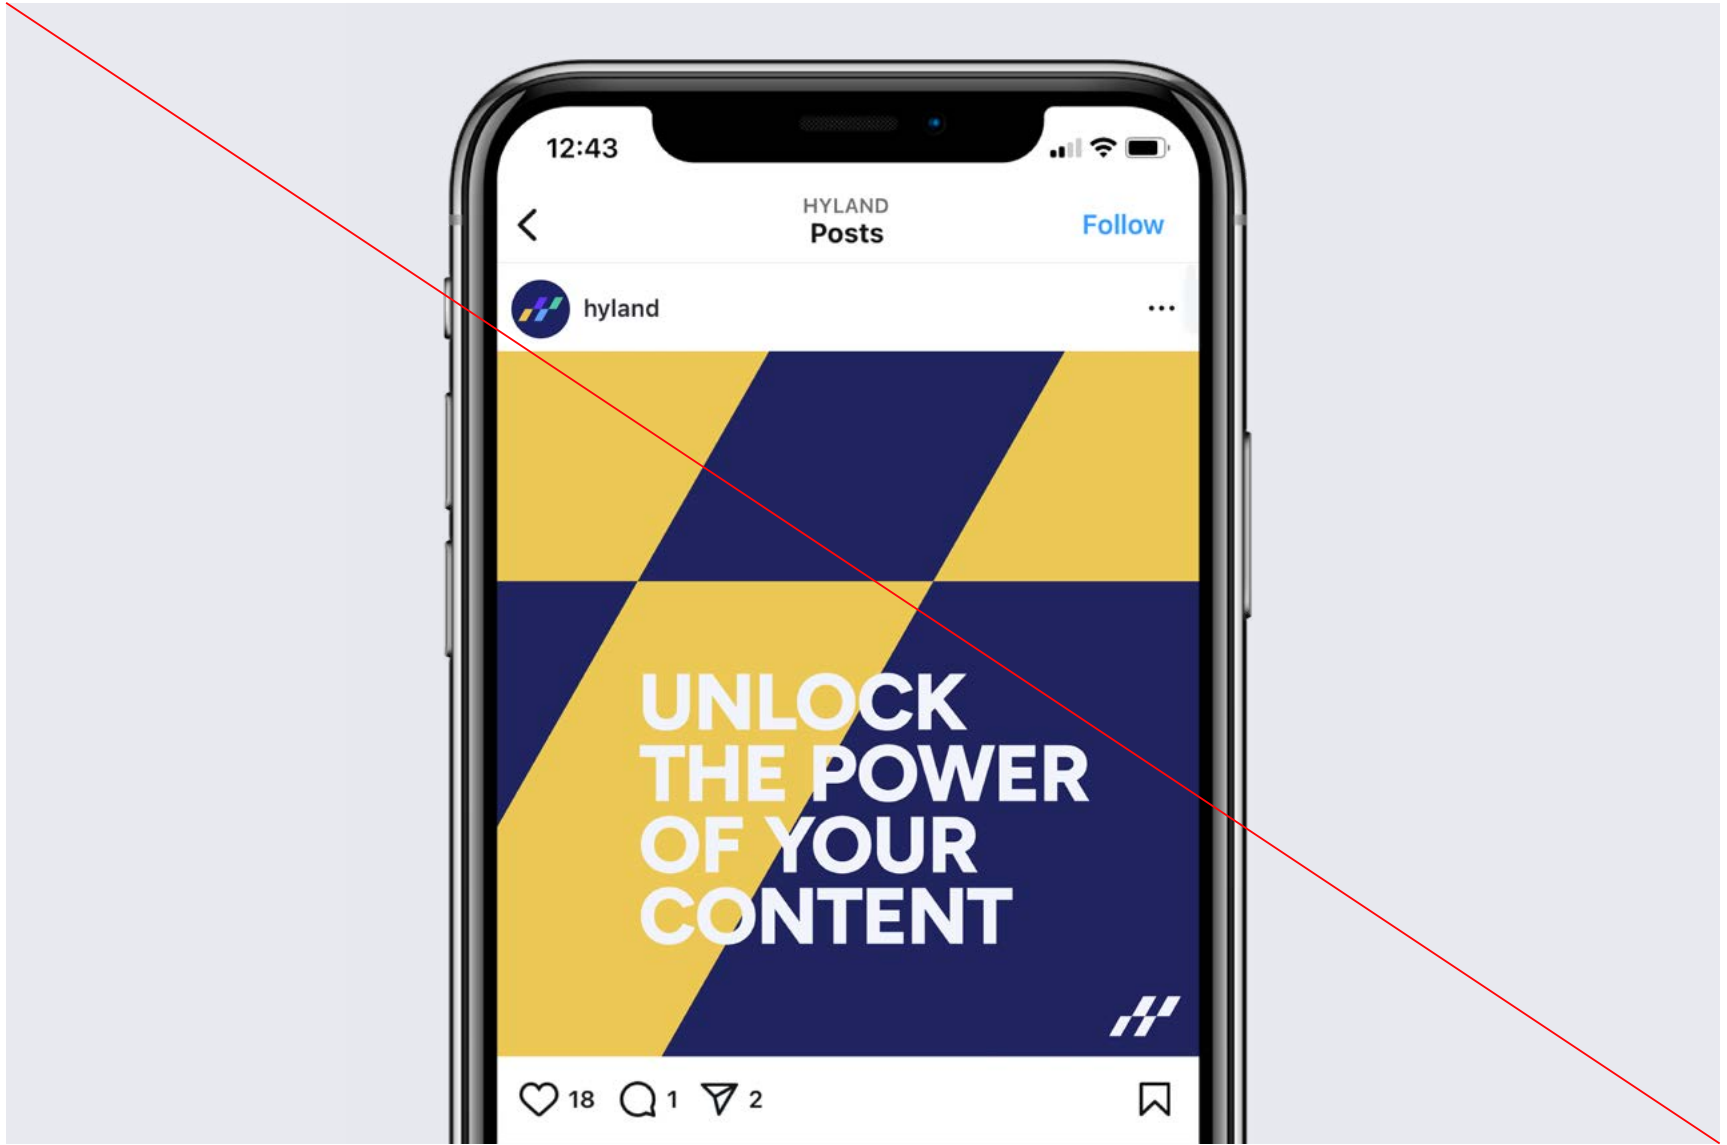

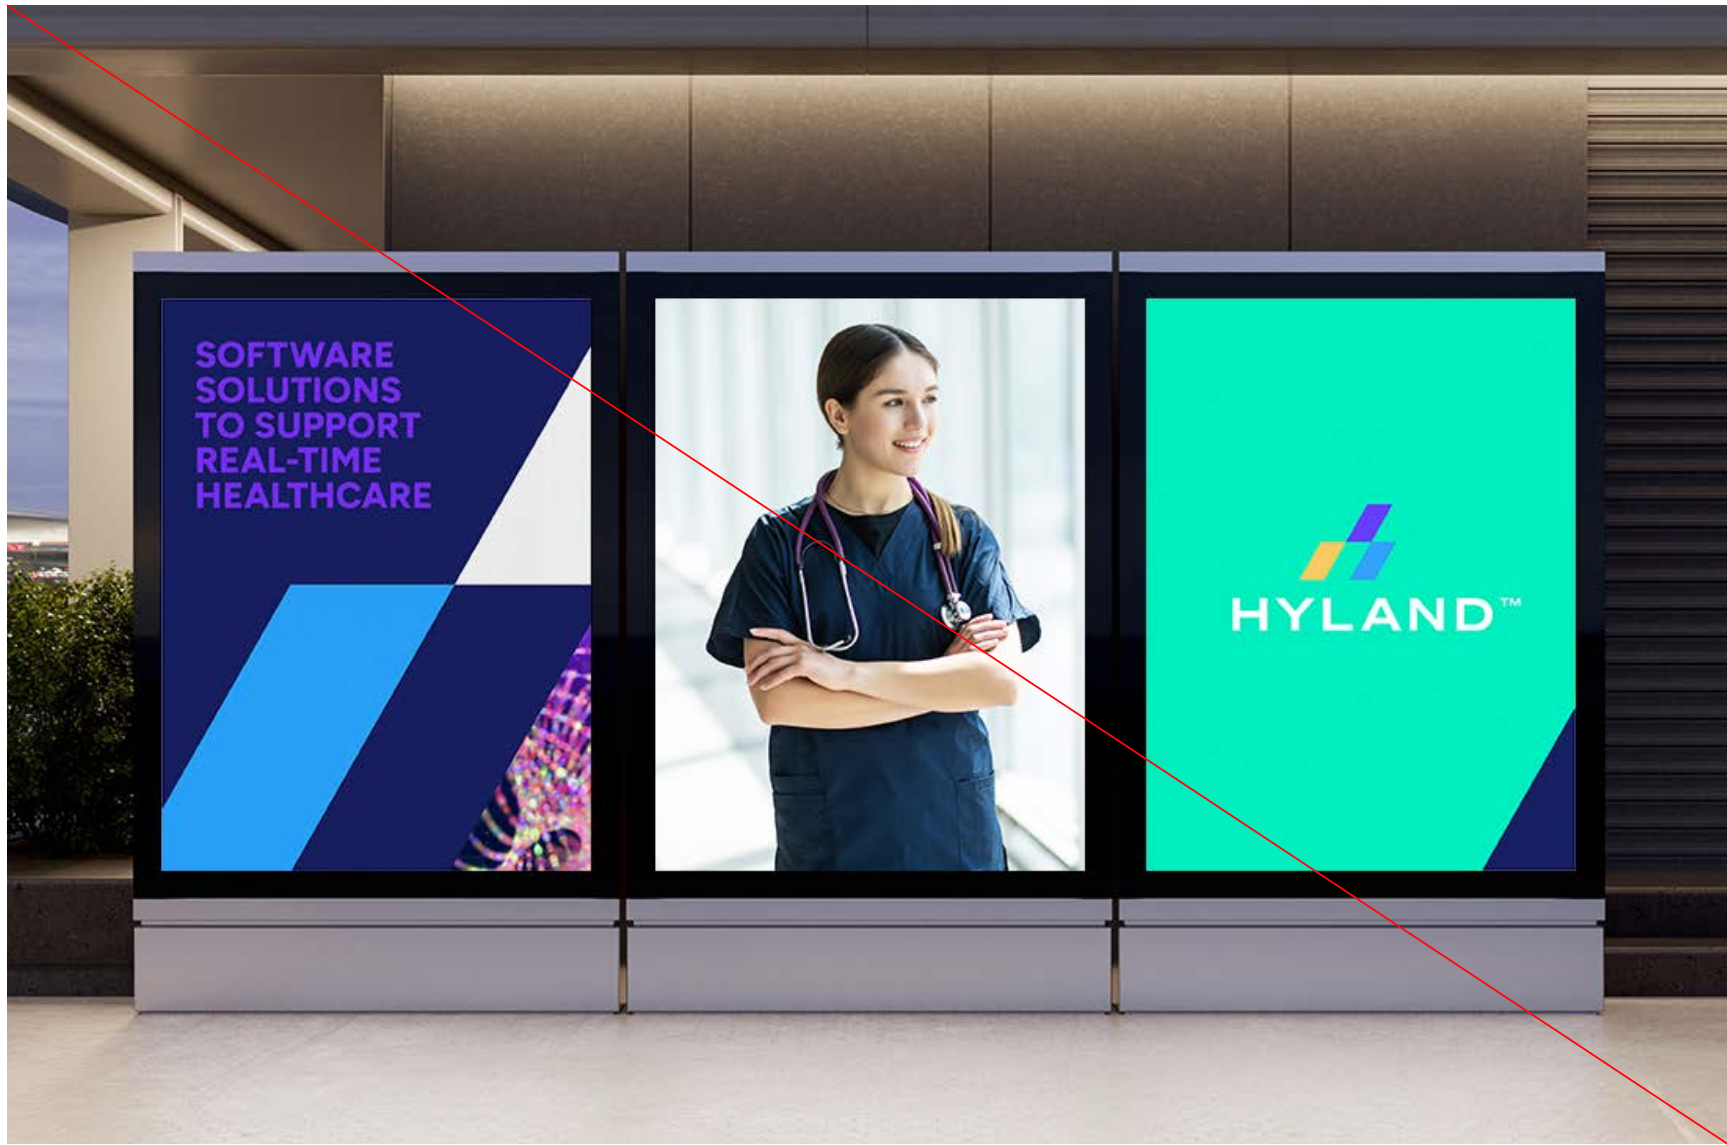

Color / Logo placement

To maximize accessibility on our logo within the linear CMYK gradient, it is best placed at the darker end as shown.

Color / What to avoid

- Avoid using secondary colors that are inaccessible with the background.
- Avoid using white text on an inaccessible background color.
- Avoid replacing the blue gradient with a secondary color.
- Avoid making gradients from the secondary color palette.

IMAGERY

We experience so much through **imagery**. It provides context and a visual connection to stories.

Hyland imagery should feature strong, compelling photography that commands attention. It should feel **bold, dramatic** and almost **cinematic**.

Imagery / Our photography styles

Our photography is represented in two ways: **Human and abstract.**

Ensure the visuals represent various perspectives, including diverse environments, people and situations. This reinforces the brand's role as indispensable across multiple high-stakes scenarios. Think expansive settings that convey scale, detailed close-ups that highlight precision and inclusive depictions of individuals taking decisive actions.

By clearly defining these elements, the photos chosen will align with the desired tone and minimize subjectivity in interpretation.

HUMAN

ABSTRACT

Imagery / Human style photography

Bold:

- High contrast: Deep colors and sharp highlights to create visual tension.
- Dynamic angles: Low perspectives, wide angles or close-up details to add intensity and grandeur.

Dramatic:

The photos should evoke a sense of importance and gravity. This can be achieved by:

- Lighting: Utilize chiaroscuro (high-contrast light and shadow) to emphasize depth and mood. Example: Spotlighting to highlight critical elements and casting shadows to add intrigue.
- Composition: Use leading lines, framing or negative space to draw the viewer's eye to the brand's indispensable role in the scene. Example: Place the subject in a moment of pivotal action or as the clear hero in the environment.
- Dynamic storytelling: Every shot should feel like part of a larger narrative, a moment of action or transition that implies movement, progress or resolution.

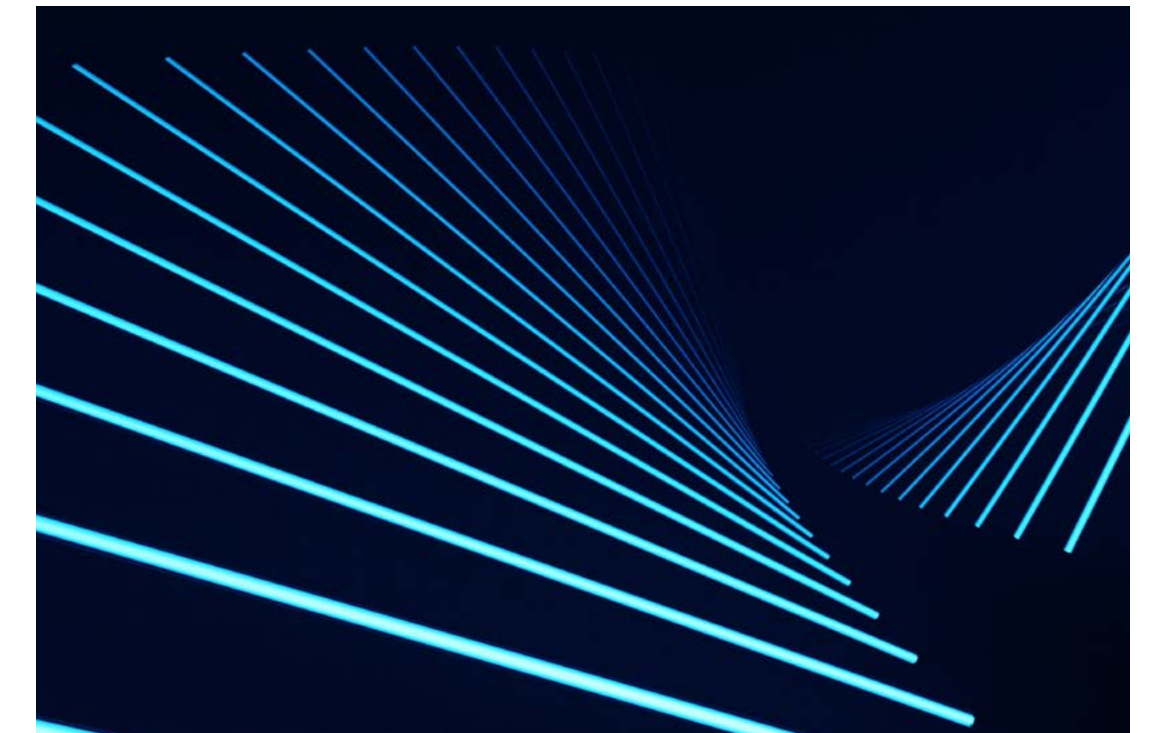

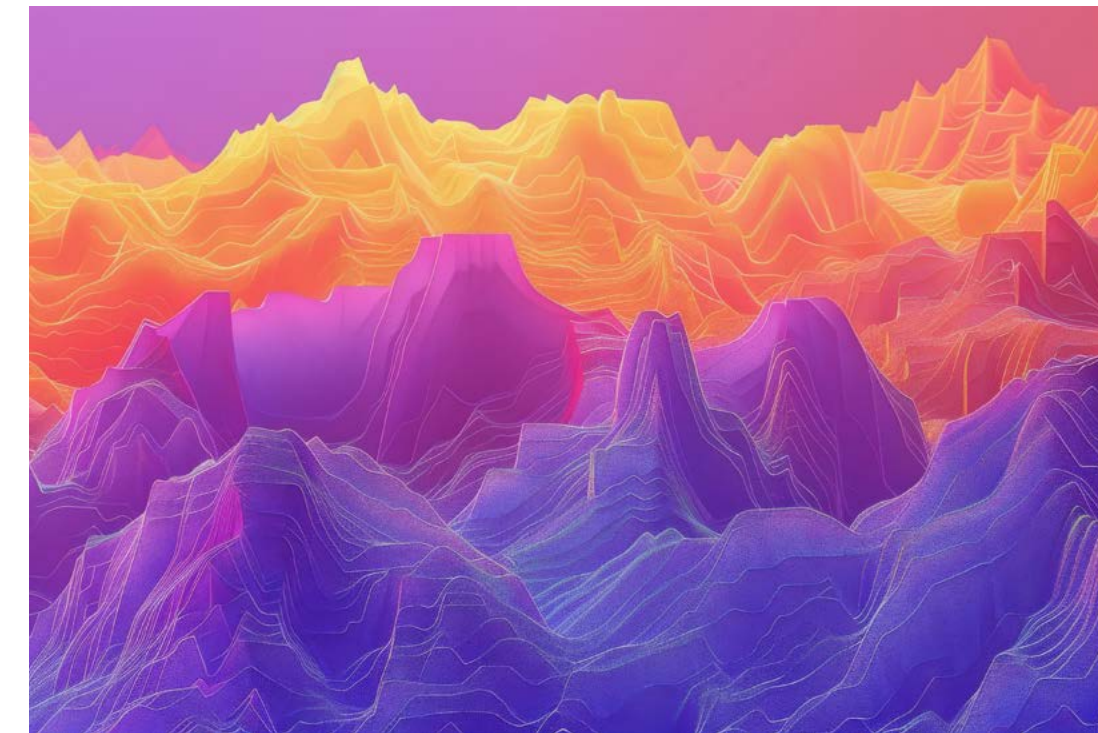

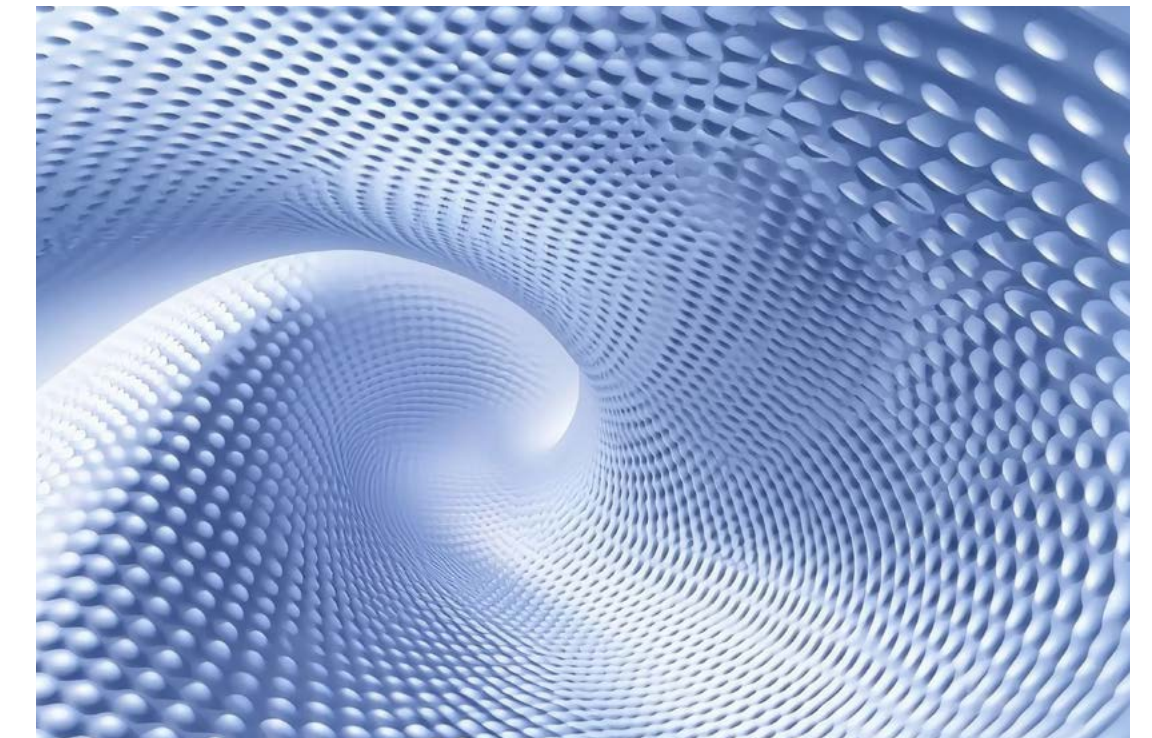

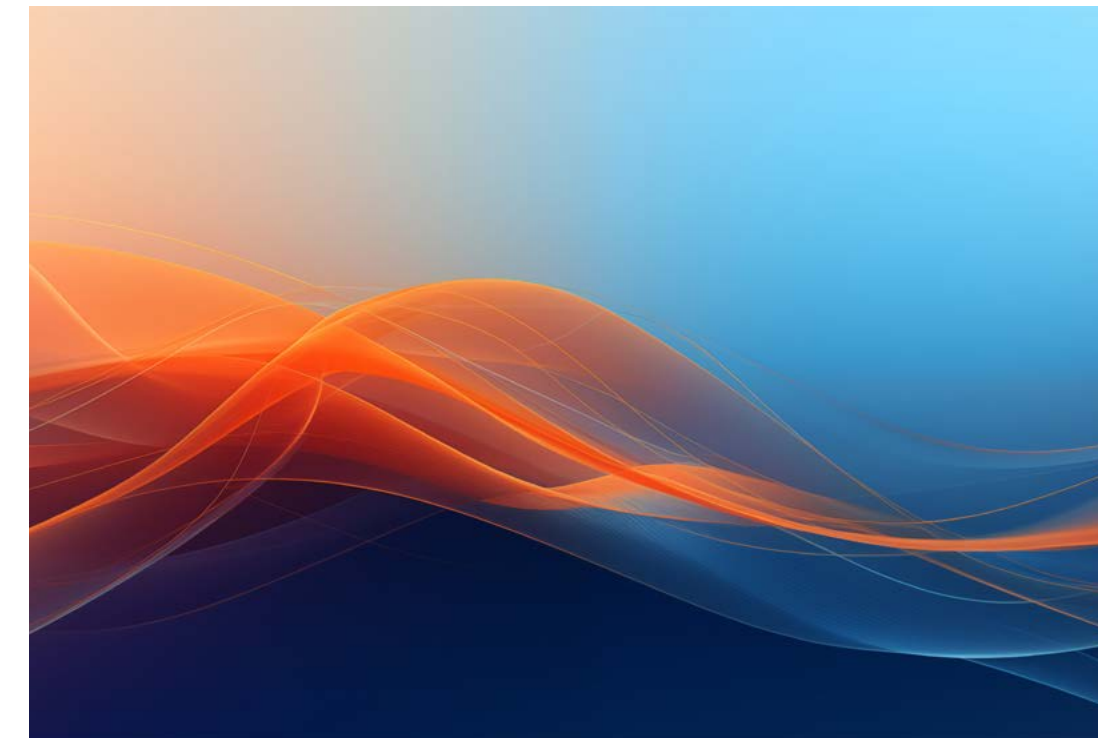

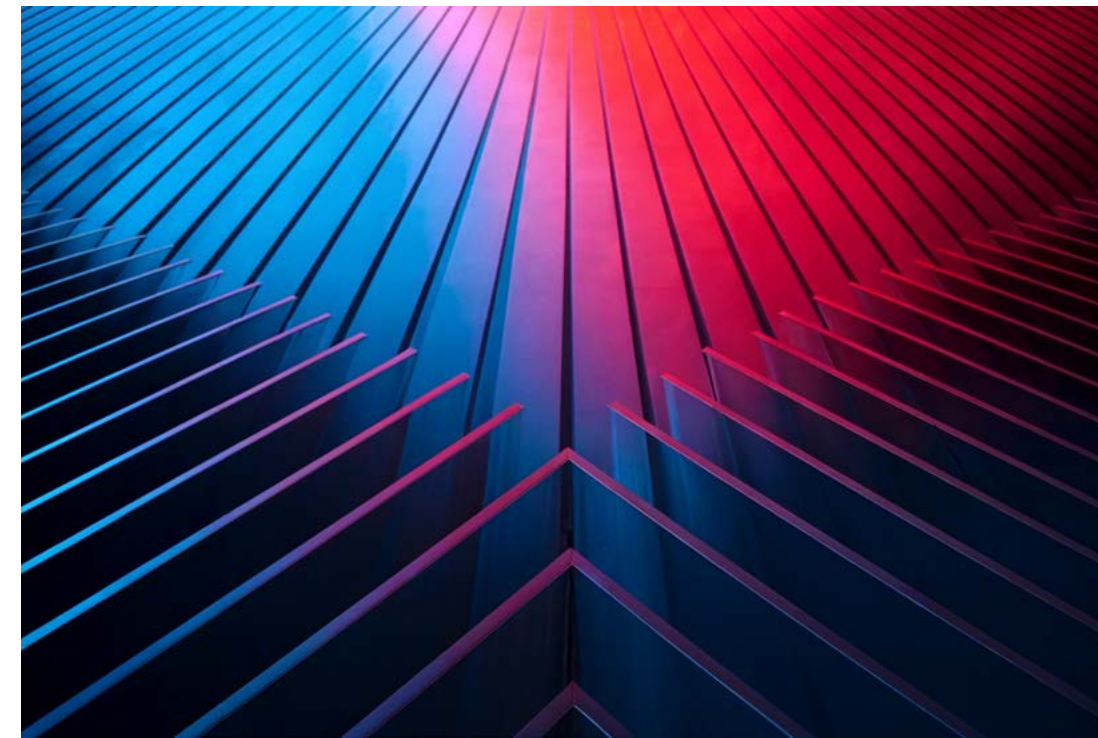

Imagery / Abstract style photography

In our abstract-led photography, the imagery must support Hyland's new brand attitudes towards the unexpected and brave.

Imagery can be representative of data, motion, a cityscape, architecture or just movement of light.

Images can be used on their own but should predominantly compliment human imagery when used together.

Imagery / What to avoid

Avoid using stock imagery that looks forced and inauthentic. This would include posing or looking directly at the camera.

Avoid stock imagery that is overly layered and doesn't align with our bold brand style.

Avoid treating photography by making it grayscale or monotone coloring.

Avoid using cut-out lifestyle without any other elements.

GRAPHIC ELEMENTS

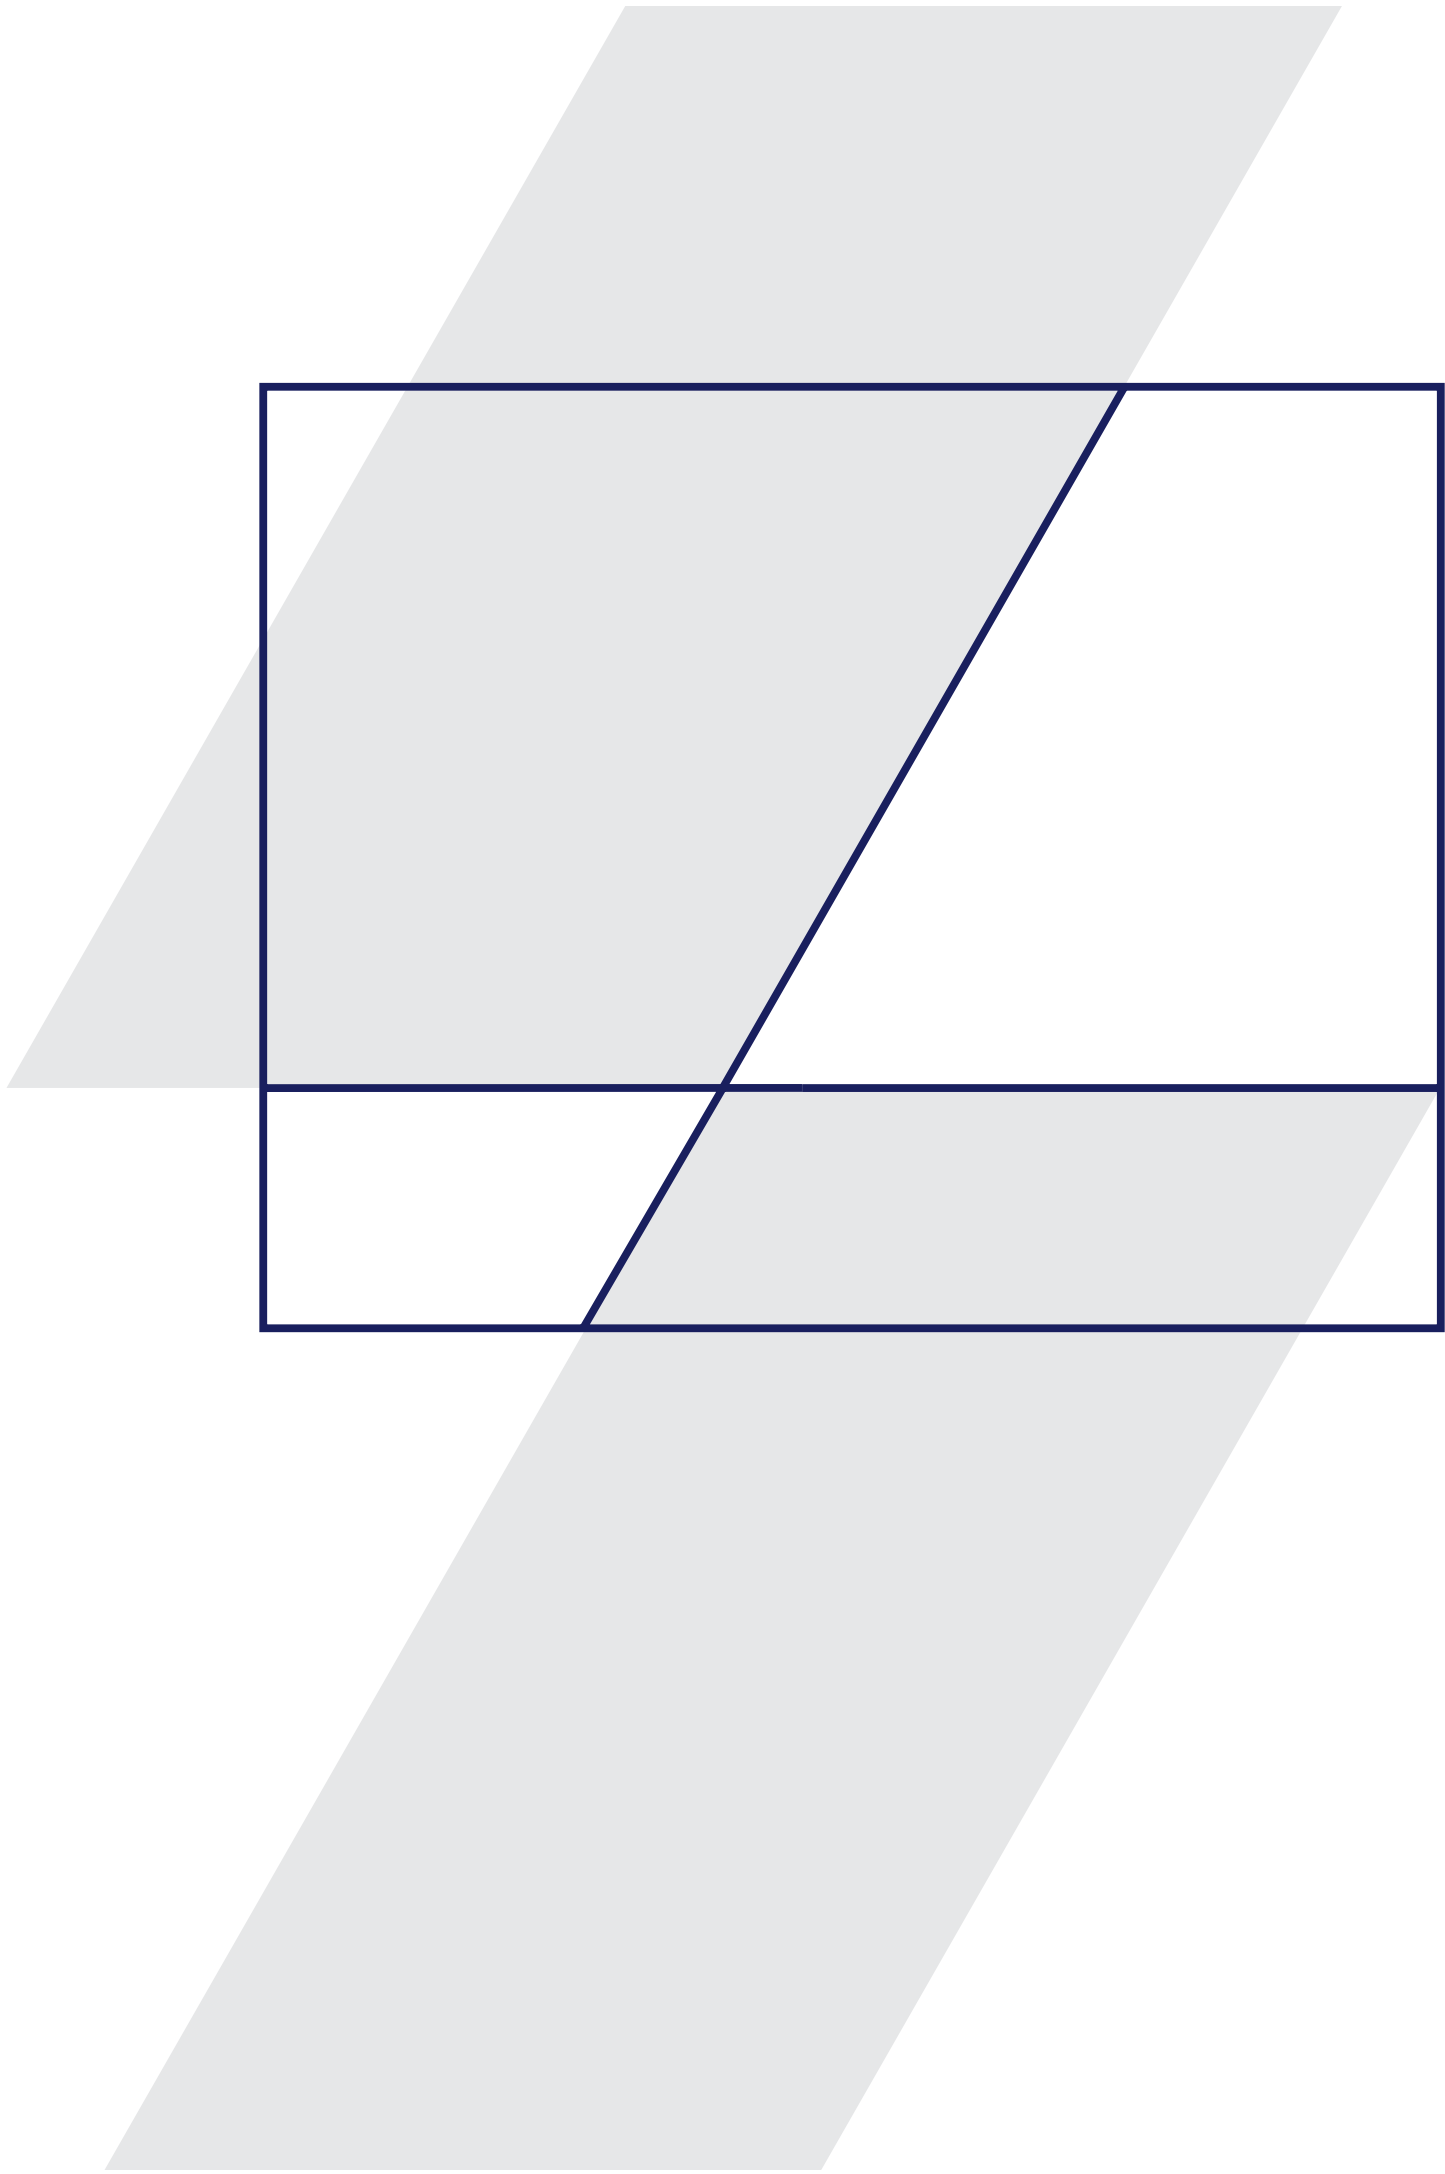

Hyland's main **graphic elements** are built on the stylings of the **H mark**. The shape and the four colored blocks provide a template for layouts, graphic shapes and the portal.

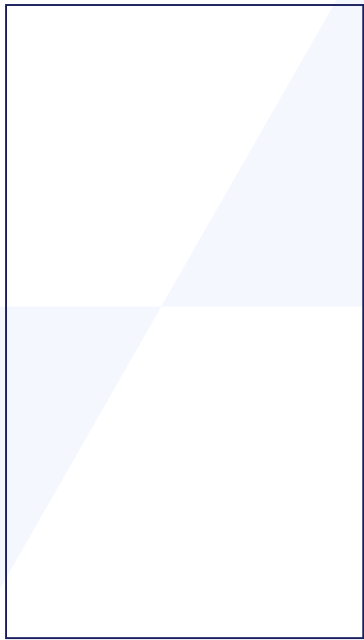

Graphic elements /
Creating layouts

The H mark has made creating templates and layouts easy.
It can be used as an image container when scaled up in size as shown.

Graphic elements /
Creating layouts

The H mark can become a graphic backdrop or an overlay to bring in the secondary color palette.

Graphic elements / Creating shapes

You can also rotate the H mark, as it provides further flexibility to create more dynamic shapes.

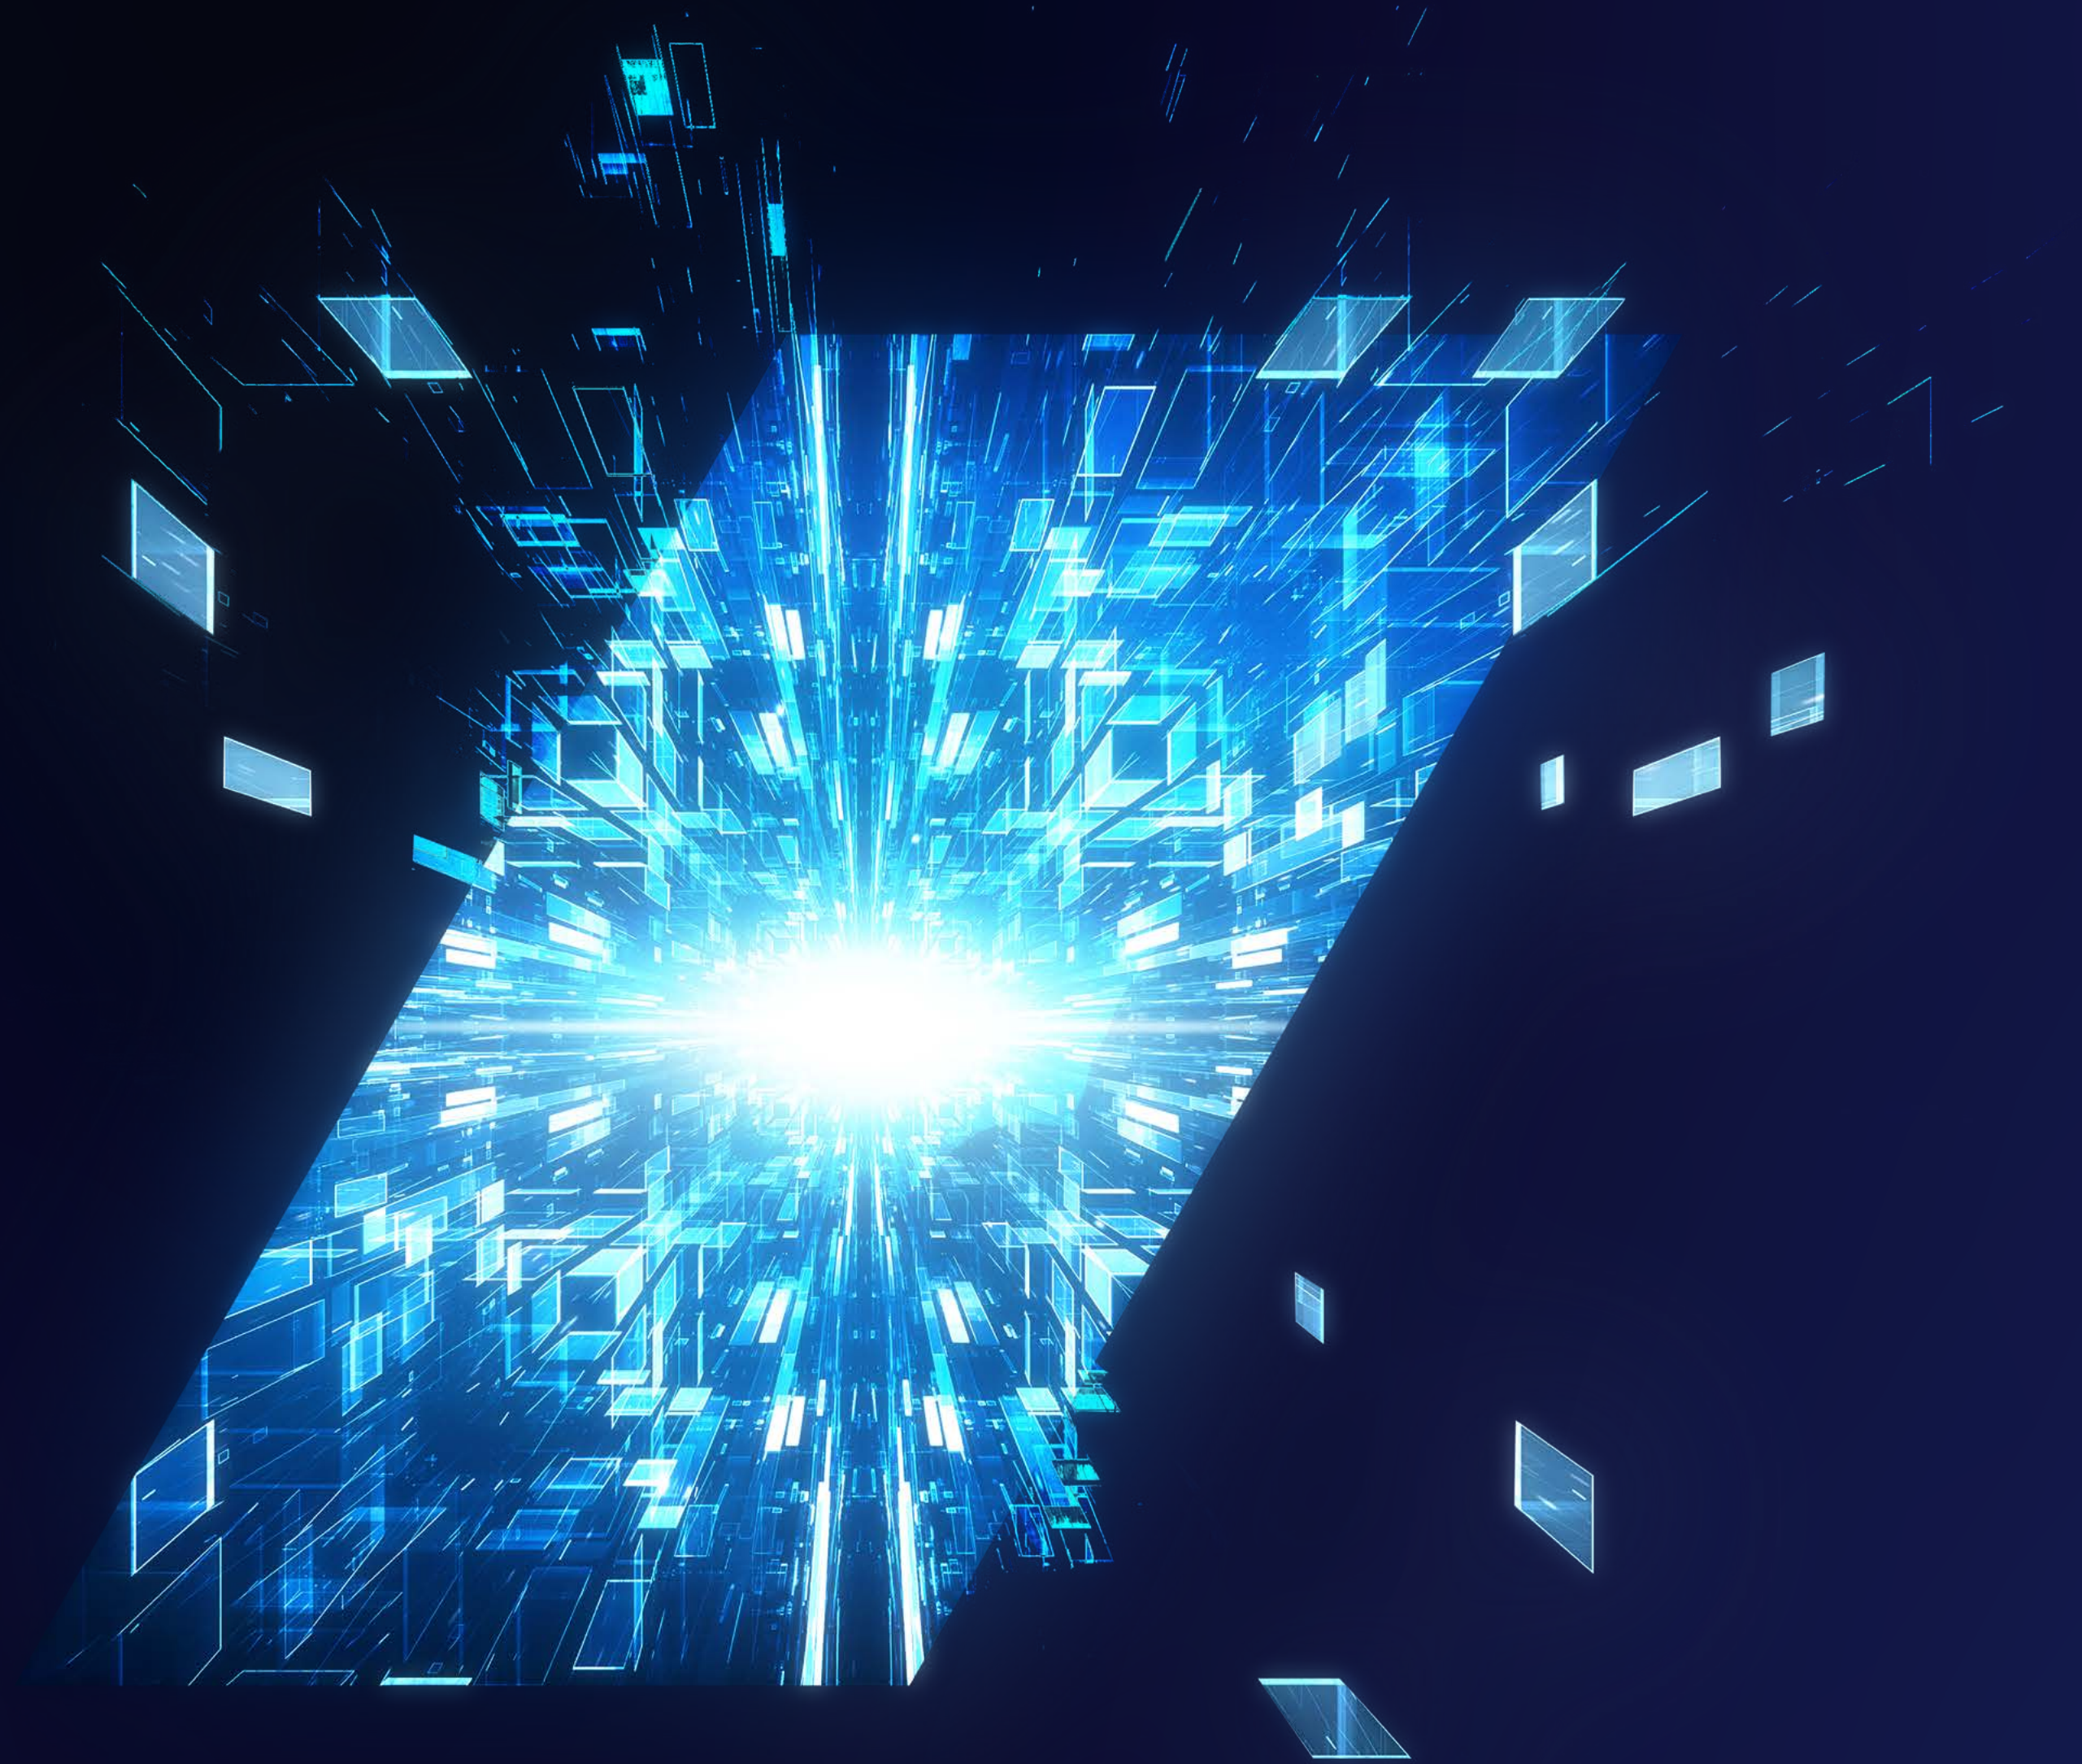

Graphic elements /
Shapes in graphic
executions

These shapes provide a graphic
backdrop when photography is
not being used, as well as housing
patterns and abstract imagery
as shown.

Graphic elements / The portal

The portal is born from one of the H mark blocks, and can be used as an image container or as an outlined shape.

Graphic elements /
The portal in action

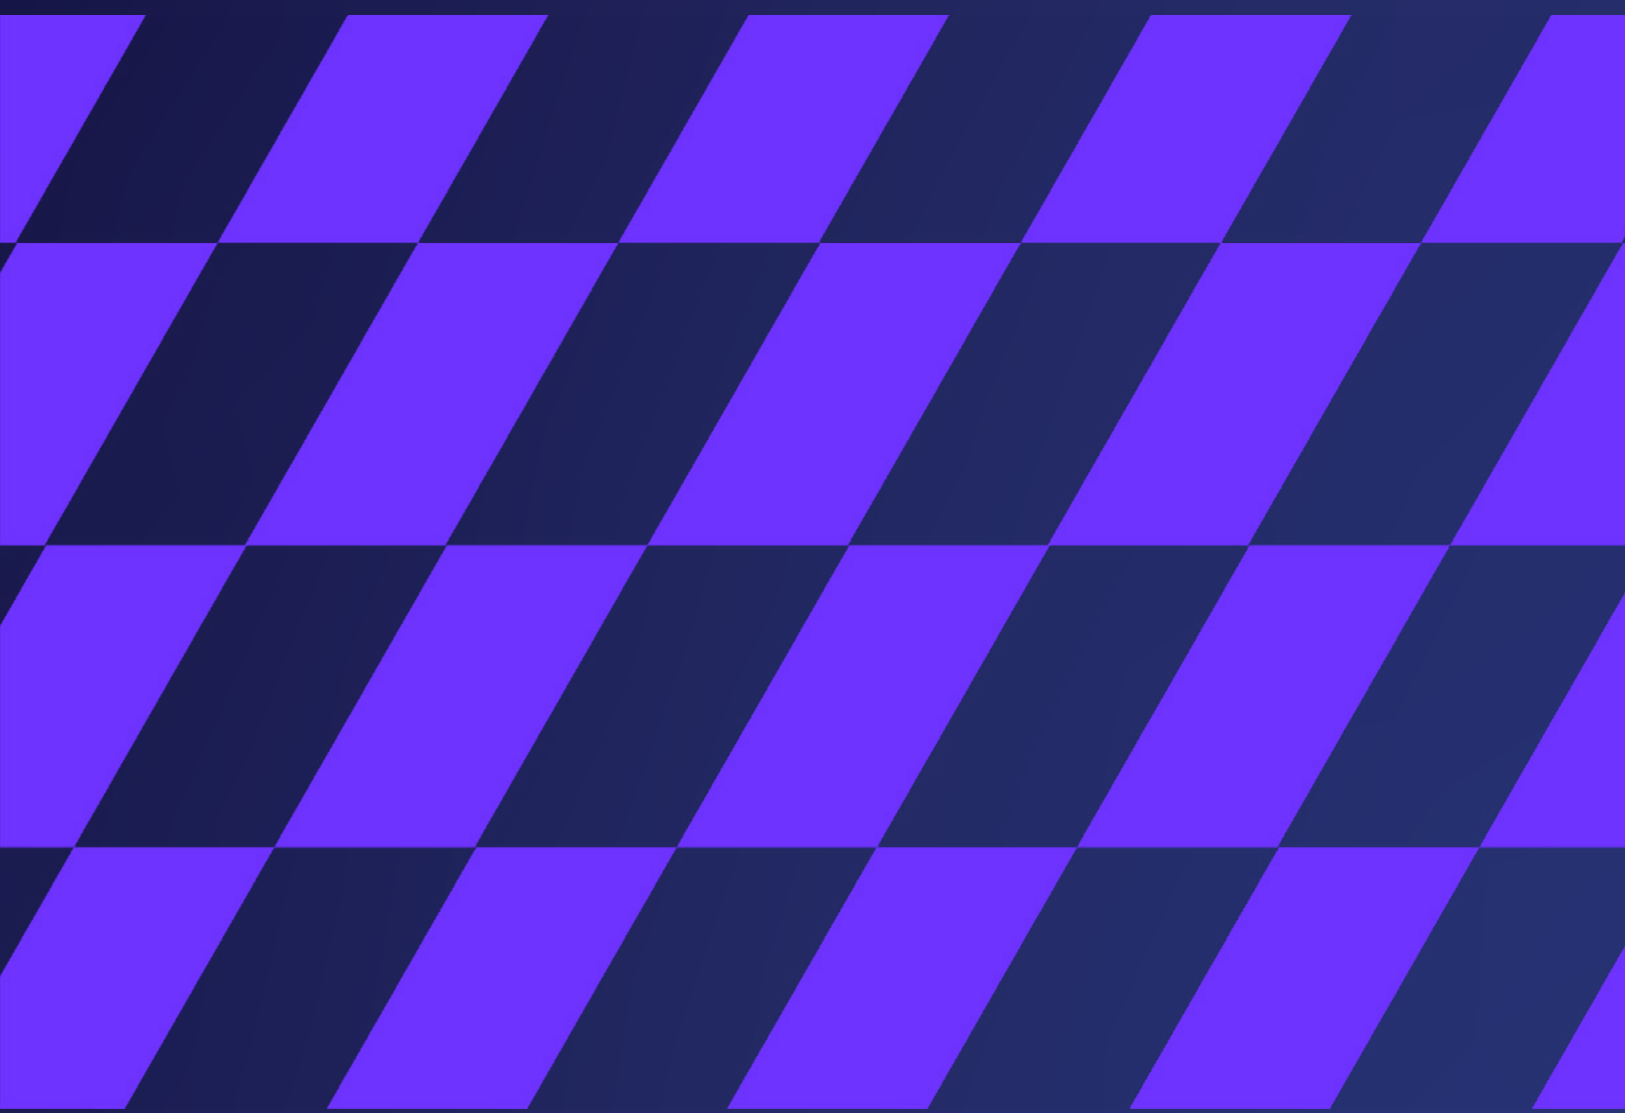

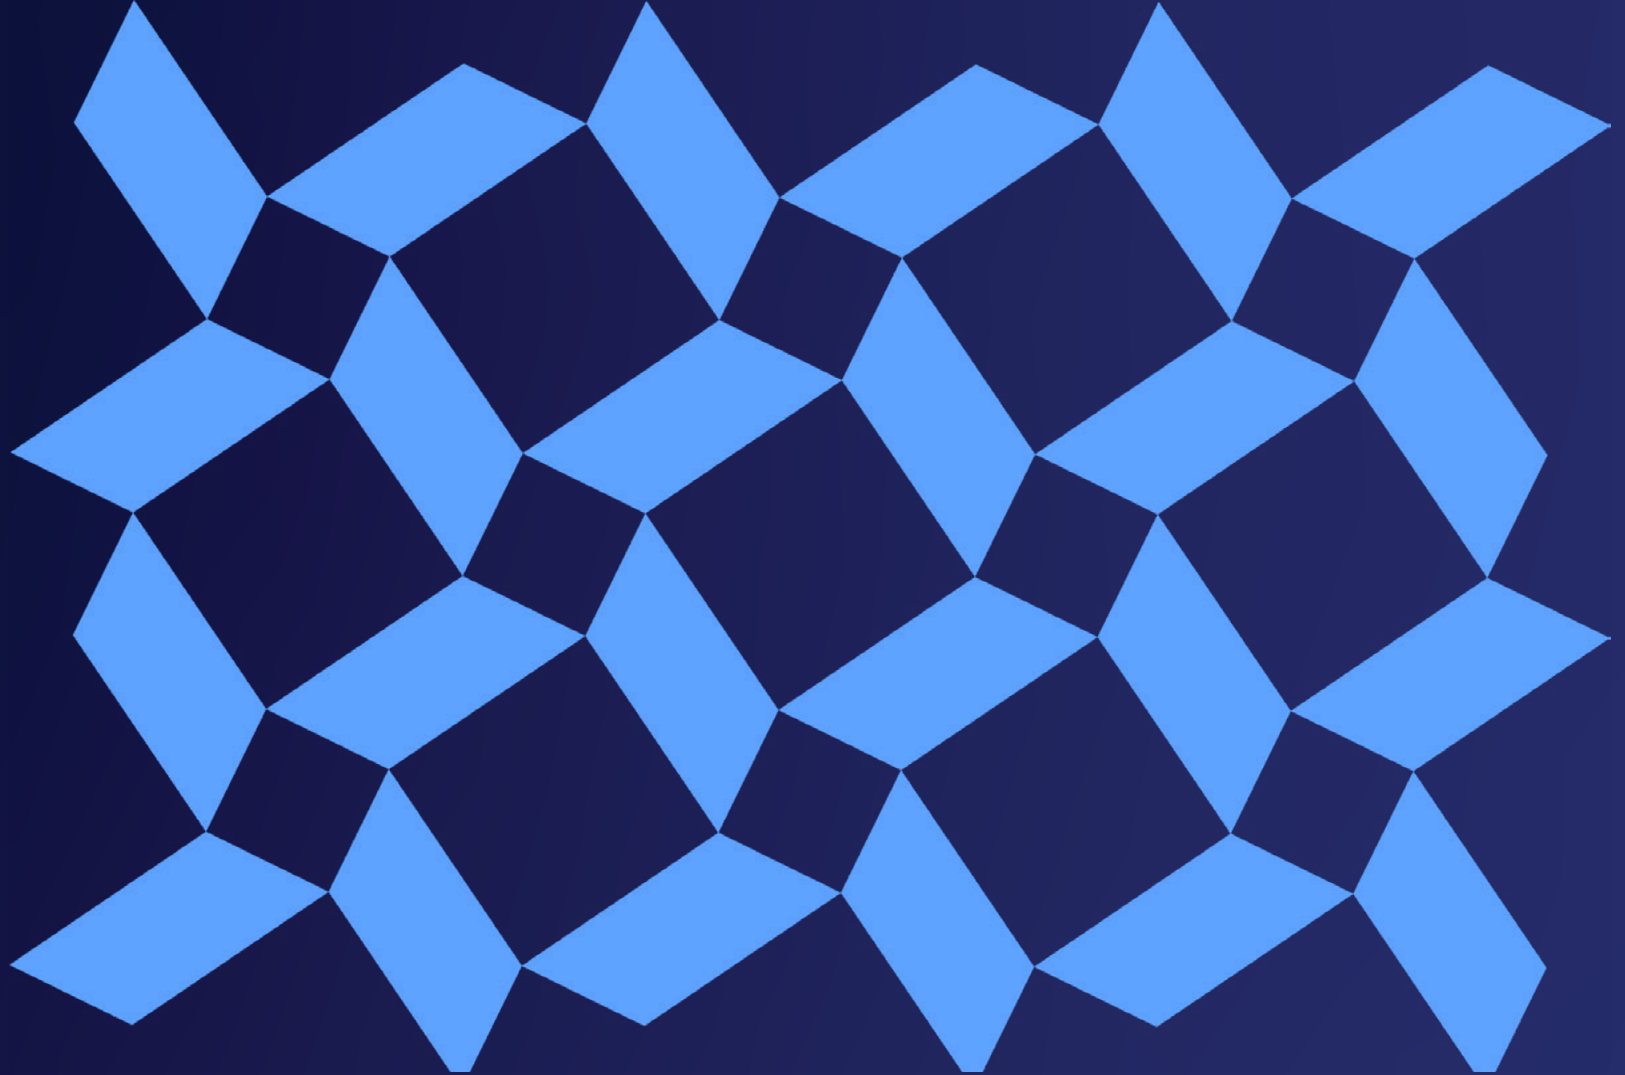

It has the flexibility to create a number of executions. It can manifest as a door to another world, a door that unleashes out to us or a simple framing device to help highlight that part of the story.

However you treat it, it should feel open and inviting, as a gateway to another world.

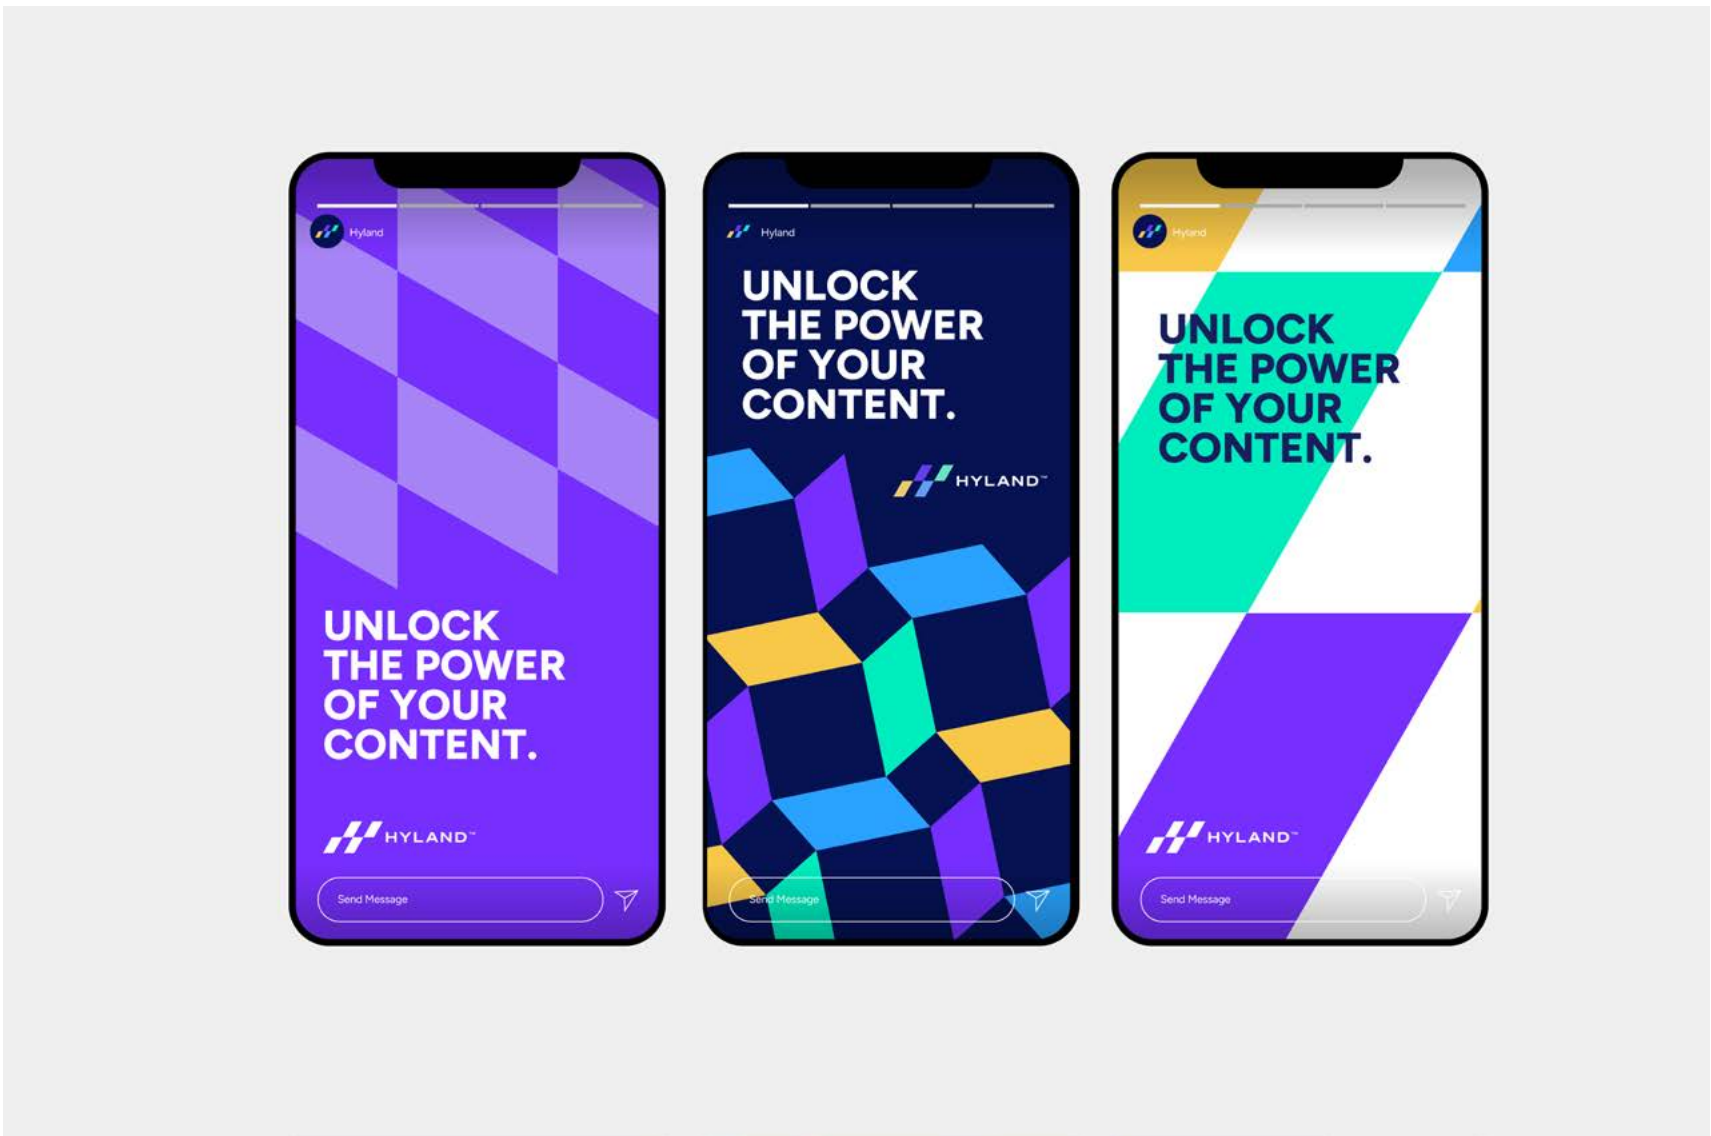

Graphic elements
/ Block patterns

Four patterns are available as part of the Hyland brand. They can be tailored at your descretion but always used in the brand color palette.

Graphic elements /
Block patterns in action

The block patterns are flexible in their application. You can use the full color palette and reduce the amount of blocks as needed. They can be utilized across many different channels, including print and digital.

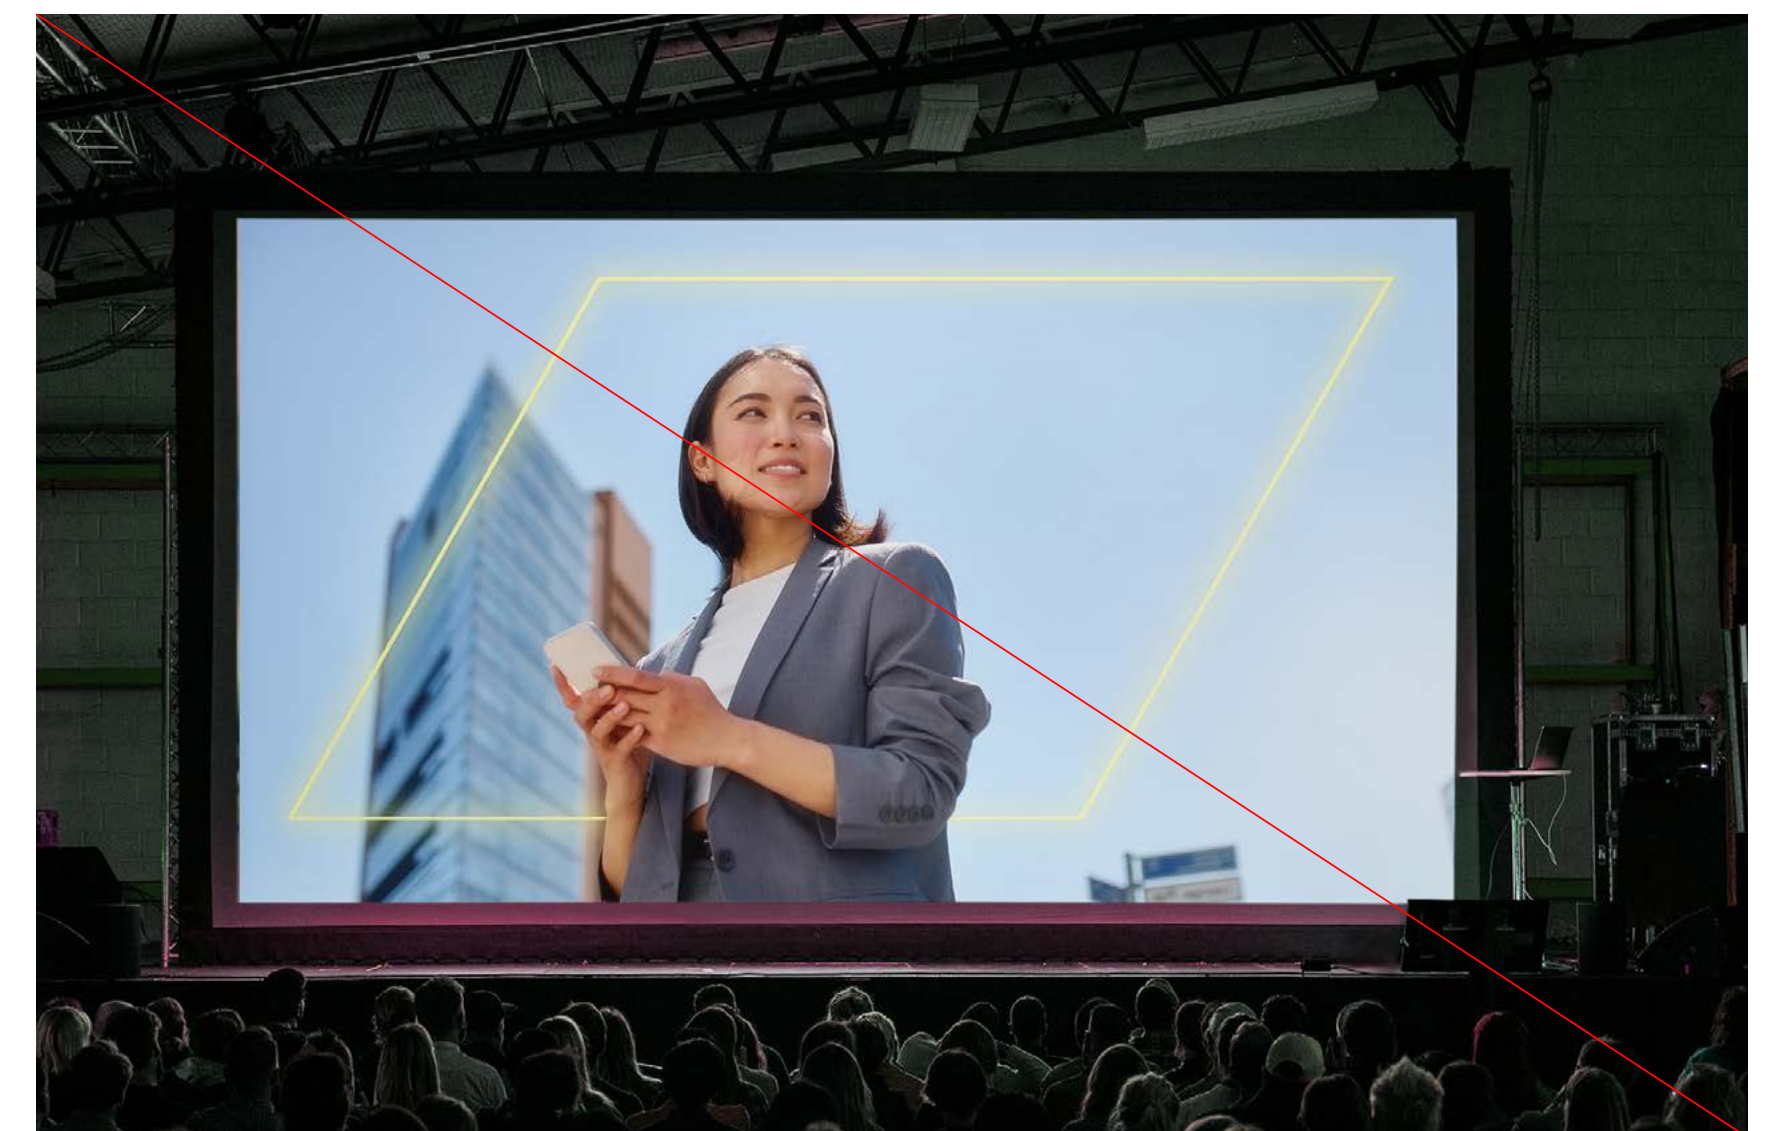

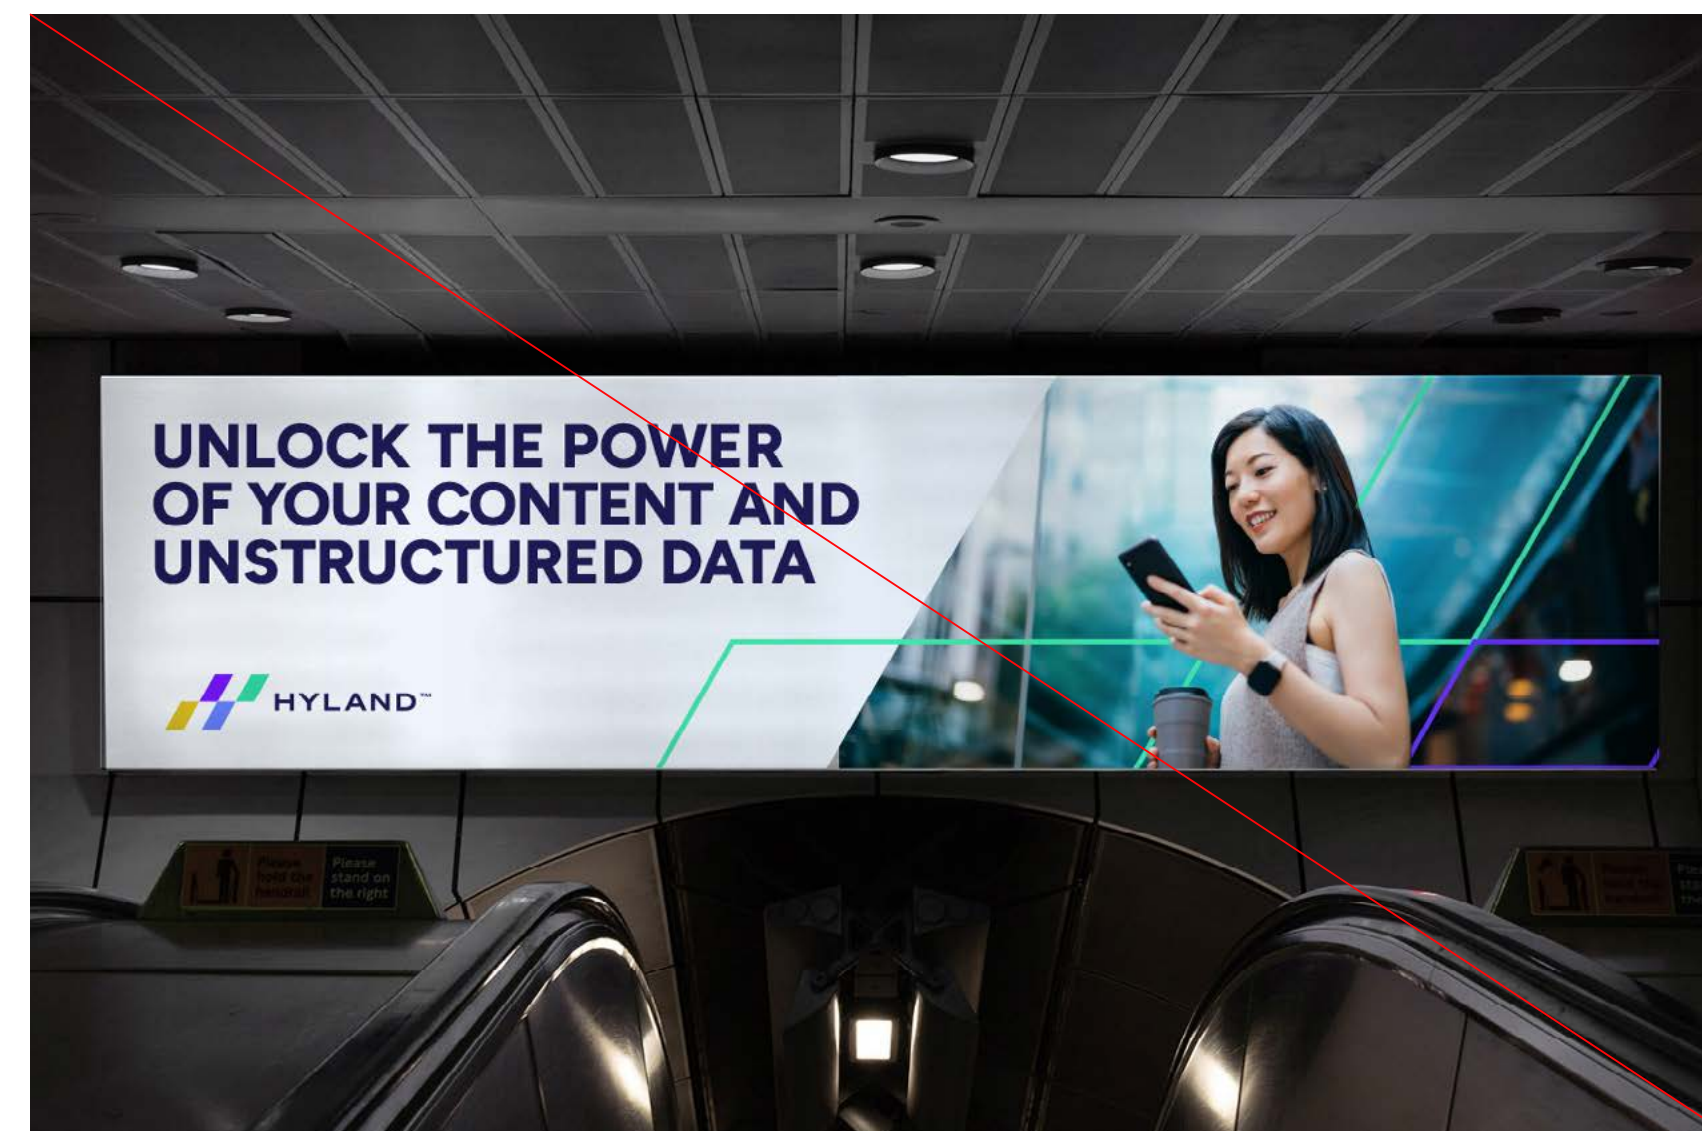

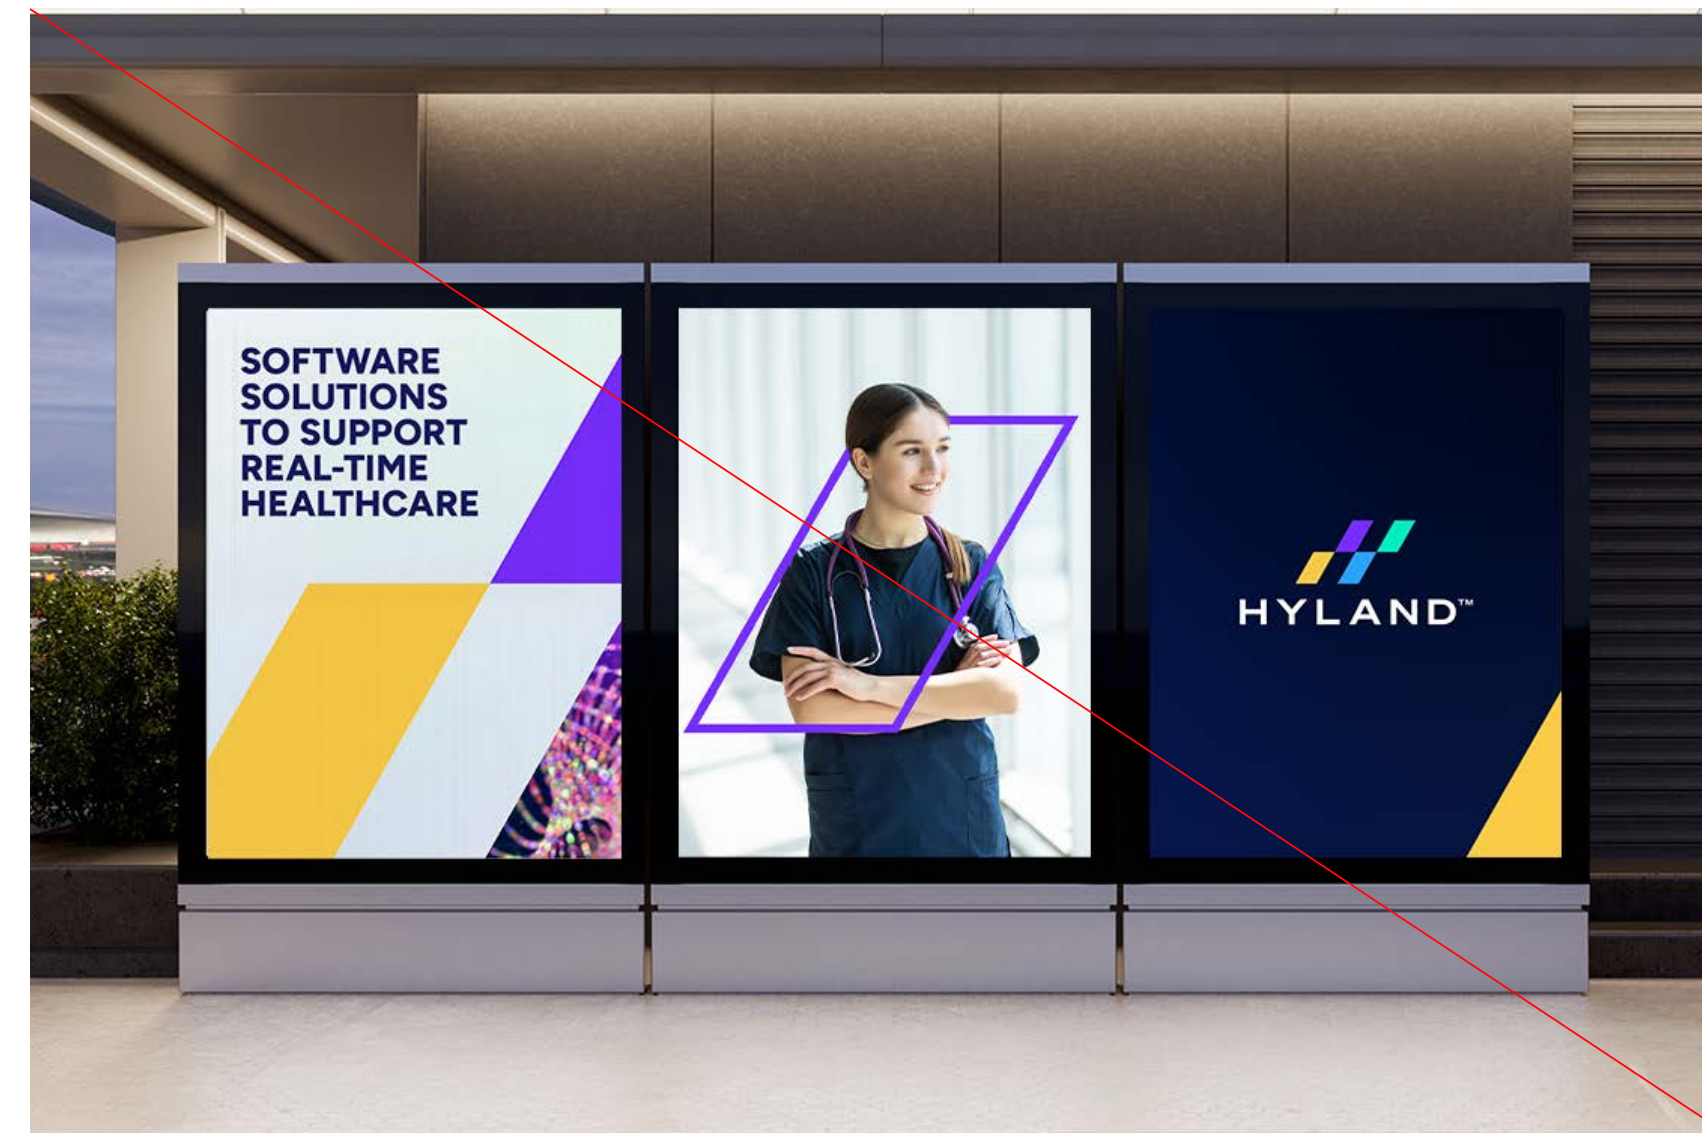

Graphic elements / What to avoid

Avoid using the portal around a subject in a restrictive way. It must feel open and inviting.

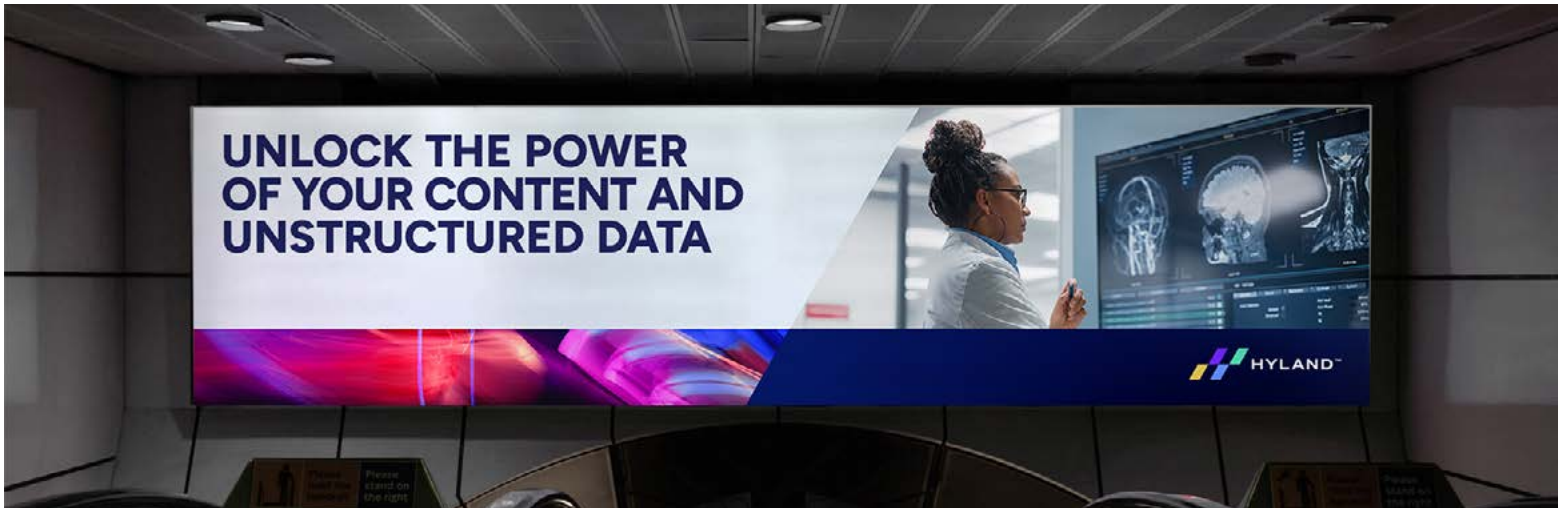

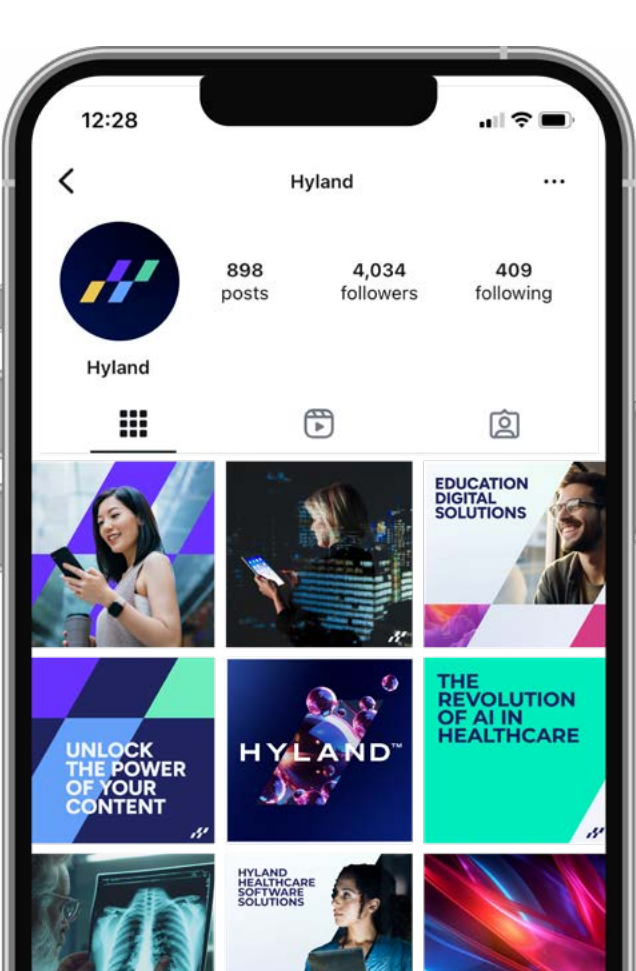

Avoid flipping the portal the wrong way, it must always lean to the right and stay true to its original form.

Avoid outlining the H mark blocks, they must remain in their solid colors.

Avoid changing or extending the portal shape. Although you can extend H Mark blocks, the portal must stay true to its original form for consistent recognition.

Graphic elements / How it all comes together

ICONOGRAPHY

Iconography /

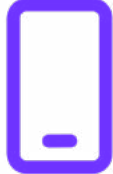

Functional icons

Our functional icons can be downloaded from Fluent Icon, a collection of 4,000+ free, open source icons from Microsoft.

They are all available here: [Fluent Icons](#)

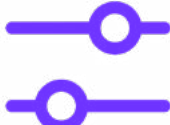

These can be used for day-to-day functional icons. Bespoke icons can be created if required, but these must follow the same style as the existing iconography within the suite.

DATA VISUALIZATION

Data visualization /
Charts and graph examples

Our charts and graphs should give a clear and concise way of communicating data.

The examples shown are a guide on style and color, although color ramps from 10%–100% can be used on both primary and scndary colors for added flexibility.

ILLUSTRATION

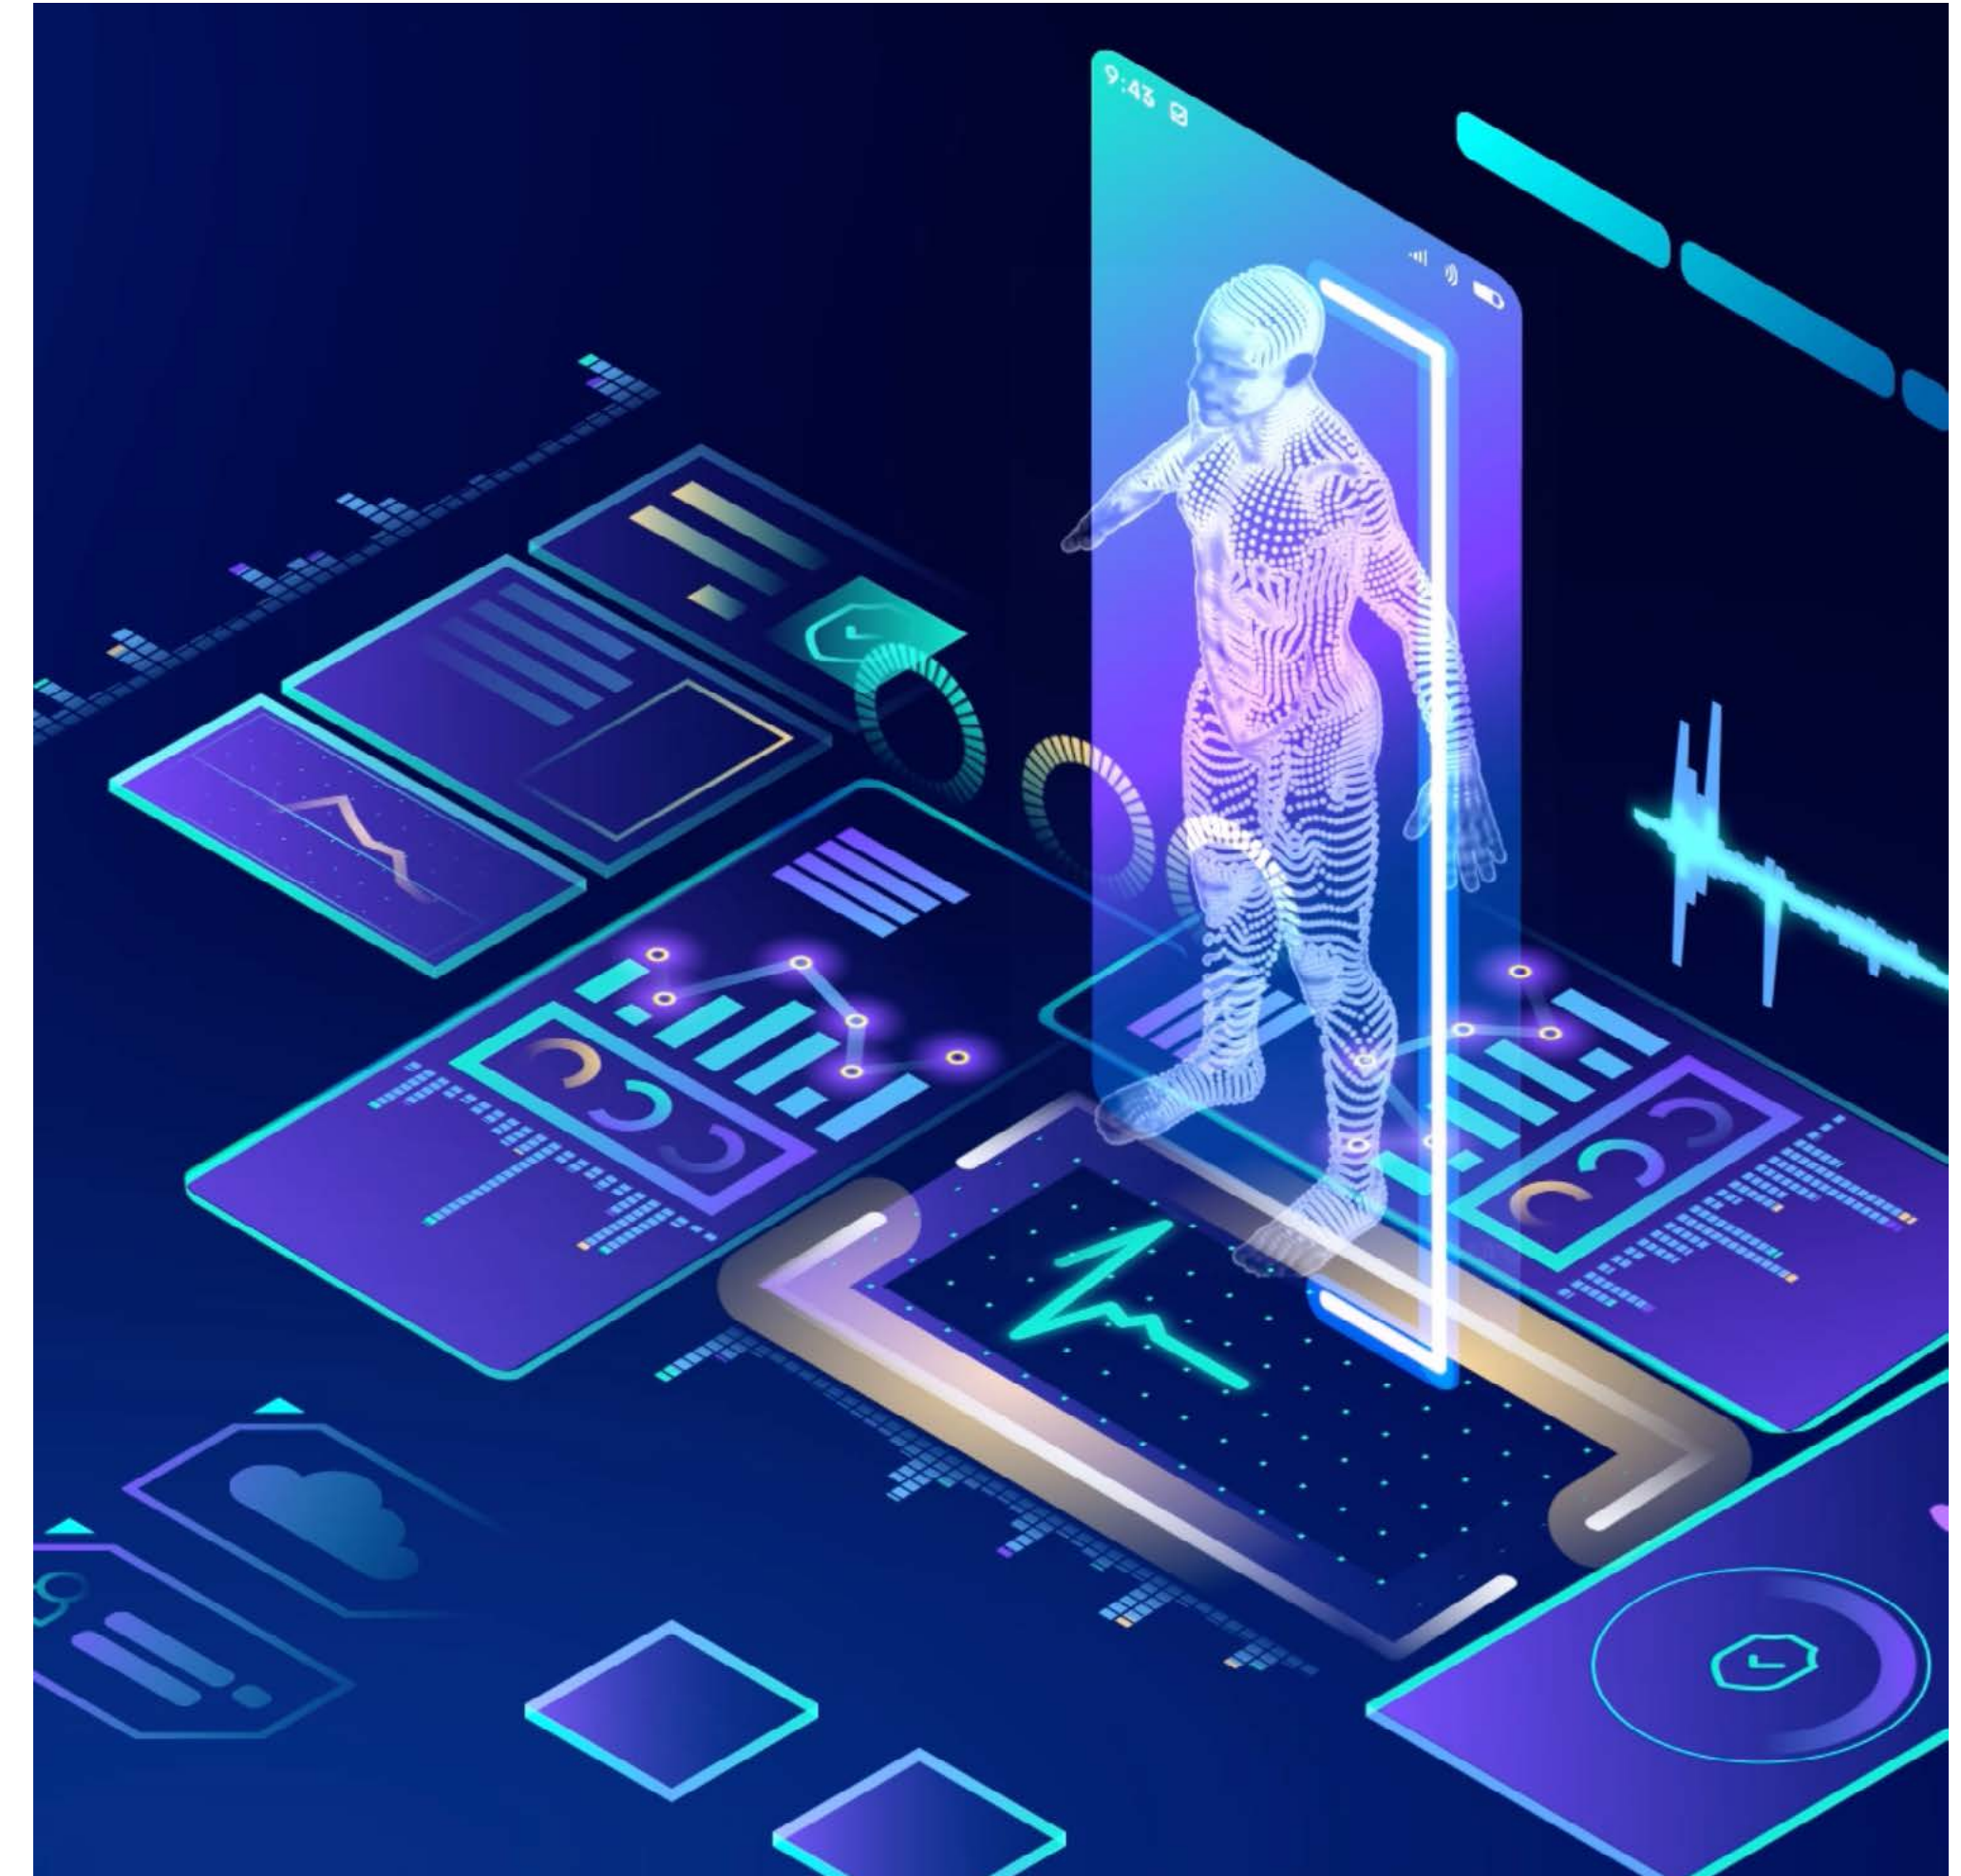

Illustration/ Style examples

Illustrations help clarify, humanize, differentiate and communicate technology more effectively than stock photography.

Our illustration style is futuristic and high-contrast. It features energetic gradients and smooth 3-D effects. Illustrations can range from simple to expressive, depending on the complexity of the visual story, and each should consistently follow the style shown here.

The color palette primarily includes purples, blues and teals, with accent colors used strategically. Dark backgrounds are preferred to maintain a modern, tech-inspired look.

ANIMATION

Animation / Logos, graphs and charts

Hyland has two examples for a logo reveal on both light and dark backgrounds.

We also have two infographic examples.
